Problems Fixed:

Firmware Version	Problems Fixed
1.11r001	Initial release

Known Issues:

Firmware Version	Issues
1.11r001	DAP-3711 is a point-to-point device, and the following known problems will occur in AP mode. 1. The IP address of the connected station always displays 0.0.0.0 if client is not the same device. 2. When AP LAN Port set to DHCP client, AP did not immediately re-initial DHCP. 3. Roaming function is not supported when running in AP mode. 4. DAP-3711 LAN Port does not support multiple VLAN ID.
