Power Usage

This device is an Energy Related Product (ErP) with High Network Availability (HiNA), and automatically switches to a power-saving Network Standby mode within 1 minute of no packets being transmitted. It can also be turned off through a power switch to save energy when it is not needed.

Network Standby: 7.18 watts
Switched Off: 0.05 watts

Package Contents

- DIR-885L
- Ethernet Cable
- Power Adapter
- Wi-Fi Configuration Card
- Quick installation Guide

Note: Using a power supply with a different voltage rating than the one included with the DIR-885L will cause damage and void the warranty for this product.

If any of the above items are missing, please contact your reseller.
## System Requirements

| Network Requirements | • An Ethernet-based cable or DSL modem  
|                      | • IEEE 802.11ac/n/g/b/a wireless clients  
|                      | • 10/100 Ethernet connection |
|______________________|______________________________|
| Web-based Configuration Utility Requirements | **Computer with the following:**  
|                      | • Windows®, Macintosh, or Linux-based operating system  
|                      | • An installed Ethernet adapter |
|______________________|______________________________|
|                      | **Browser Requirements:**  
|                      | • Internet Explorer 10 or higher  
|                      | • Firefox 28 or higher  
|                      | • Safari 6 or higher  
|                      | • Chrome 28 or higher |
|______________________|______________________________|

| QRS Mobile Requirements | • iPhone, iPad, Android, or Windows smartphone or tablet (please refer to the mobile app’s store page to check whether your device is compatible) |
Introduction

The D-Link DIR-885L AC3150 Ultra Wi-Fi Router shares your Internet connection over a blazing-fast Gigabit Wireless AC connection of up to 3150 Mbps (Up to 2167 Mbps 5 GHz Wireless AC and up to 1000 Mbps 2.4 GHz Wireless N)¹, using advanced AC beamforming technology to significantly outperform 802.11n and other 802.11ac devices. Equipped with one Gigabit WAN/Internet port and four Gigabit LAN ports to provide speeds up to 10 times faster than standard 10/100 ports, the DIR-885L creates the best networking experience to date.

Featuring four antennas and a 4 x 4 Multiple In Multiple Out (MIMO) antenna configuration, the DIR-885L offers better data rates, fewer dead-spots, more coverage, and higher reliability. Operating exclusively in the 5 GHz band, the DIR-885L's 802.11ac wireless connections avoid the crowded 2.4 GHz band, allowing you faster speeds while still maintaining backwards compatibility with older 802.11n/g/b devices. The DIR-885L prepares your home to become a Connected Home by bringing Wi-Fi to places your old signal can't reach. A stronger Wi-Fi signal means you can install more wireless surveillance cameras, baby monitors, sensors, and alarms in the places where you need them.

The DIR-885L's Smart Connect Technology makes connecting to wireless networks easy by eliminating the confusion of multiple networks. Ever since the introduction of 5 GHz multi-band wireless technology, users have had to guess whether the 5 GHz or 2.4 GHz band network would provide them with better range and speed. Smart Connect simplifies this by only presenting a single wireless network for you to connect to. Behind the scenes, when a connection is initiated, the DIR-885L's advanced algorithms determine the best band for your device to connect to, automatically distributing devices to the optimal band, thereby ensuring a faster, more reliable, and hassle-free experience for all of your users and devices.

The AC3150 Ultra Wi-Fi Router is also mydlink-enabled, which gives you access to your home network no matter where you go. Now you can monitor and manage your home network right from your laptop, iPhone®, iPad®, Android™ device, or Windows Phone™. All mydlink-enabled routers can be configured to send an email to keep you informed anywhere, anytime when new devices are connecting to your network or unwanted access is detected. Monitor in real-time websites that are being visited with recent browser history displayed on the mydlink™ Lite app – which is great for parents. Also, mydlink features Zero Configuration, allowing you to simply install a camera and have it automatically appear in your mydlink account.

SharePort technology lets you take advantage of the USB 3.0 port found on the back of your DIR-885L. Plug in a USB storage drive and you can use the mydlink SharePort™ app for iPad®, iPhone®, iPod touch®, and Android™ device to access files, stream videos, view photos, or listen to music on your laptop or mobile devices.

We've all come to expect a fast, click-and-get-it Internet, but as you add more users and devices to your home network, choppy video and delays is often the result. D-Link's Intelligent Quality of Service (iQoS) Technology makes your Internet work better when your connection is pushed to its limit. Before iQoS, configuring QoS was a frustrating process, but now you can quickly prioritize Internet traffic using D-Link's easy-to-use drag and drop graphical interface. With iQoS you're just a few clicks away from enjoying smoother 3D/4K video streaming, gaming, and VoIP calls while your low-priority downloads and devices don't consume your bandwidth.
Section 1 - Product Overview

Introduction (continued)

This router is equipped with D-Link's Quick VPN technology. Using Quick VPN allows you to securely connect your computer or mobile device to places with free, untrusted Wi-Fi hotspots by encrypting and relaying your connection through your home Internet connection. This extra 'hop' reduces the chances of hackers stealing your information, such as logins, passwords, and credit card numbers. When traveling, Quick VPN lets you watch sports and use video streaming services without experiencing blackouts or filtering. You can surf the whole Internet unfiltered and unblocked, just as you would at home.

The DIR-885L supports the latest wireless security features to help prevent unauthorized access, be it from over a wireless network or the Internet. Support for WPA™ and WPA2™ standards ensure that you will be able to use the best possible encryption regardless of your client devices. In addition, this router is equipped with a dual-active firewall (SPI and NAT) to prevent potential attacks over the Internet.

The DIR-885L AC3150 Ultra Wi-Fi Router provides incredible speeds, smart antenna technology, fast ports, cloud features, and terrific security features. It also features an innovative design and easy installation options.

1 Maximum wireless signal rate derived from IEEE Standard 802.11a, 802.11g, 802.11n and 802.11ac specifications. Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead, lower actual data throughput rate. Environmental conditions will adversely affect wireless signal range.
Section 1 - Product Overview

Features

- **Superior Wireless Networking** - The DIR-885L provides Gigabit wireless speeds of up to a combined 3150 Mbps (2167 Mbps 802.11ac 5 GHz, plus 1000 Mbps 802.11n 2.4 GHz)\(^1\). This capability rivals wired connections, allowing users to participate in real-time activities online, such as HD video communication, online gaming, and use mobile devices from anywhere in your home while still offering full 802.11n/g/b backward compatibility.

- **Extreme Wired LAN and WAN Networking** - With four 10/100/1000 Gigabit Ethernet LAN ports, and a 10/100/1000 Gigabit Ethernet WAN port, the DIR-885L has an enormous amount of bandwidth to take full advantage of the highest speed broadband connections available.

- **Smart Connect** - Creates a 'single' wireless network for your devices to connect to. Behind the scenes, the DIR-885L automatically determines whether to connect a device to the 2.4 or 5 GHz band, thereby providing the best speed and range for each device and optimally distributing devices to each network.

- **Cloud Features** - The DIR-885L supports the QRS Mobile (Quick Router Setup) app to set up the router using a mobile device. It is also mydlink-enabled so you can remotely access and manage your DIR-885L from a mobile device using the mydlink Lite app. The mydlink SharePort™ app can be used to share files, stream videos, view photos, and play music. SharePort Plus also lets you share a printer.

- **IPv6 Support** - The DIR-885L fully supports IPv6 and includes support for a variety of IPv6 connection types including: SLAAC/DHCPv6, 6to4, 6rd, Static IPv6, IPv6 PPPoE, IPv6 in IPv4 tunneling, and local connectivity.

- **Advanced Firewall Features** - The web-based user interface displays a number of advanced network management features. Easily apply content filtering based on MAC address, URL, and/or domain name. Schedule these filters to be active on certain days or for a duration of hours or minutes.

- **Secure Multiple/Concurrent Sessions** - The DIR-885L can pass through VPN sessions. It supports multiple and concurrent IPSec and PPTP sessions, so users behind the DIR-885L can securely access corporate networks.

- **User-friendly Setup Wizard** - Through its easy-to-use web-based user interface or QRS Mobile application, the DIR-885L lets you quickly configure and secure your router to your specific settings in minutes.

---

1 Maximum wireless signal rate derived from IEEE Standard 802.11a, 802.11g, 802.11n and 802.11ac specifications. Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead, lower actual data throughput rate. Environmental conditions will adversely affect wireless signal range.
1 Power LED  
A solid white light indicates a proper connection to the power supply. The light will be a solid orange during boot up.

2 Internet LED  
A solid light indicates connection on the Internet port. If the LED is orange, the connection is good but the router cannot connect to the Internet.

3 Wireless (2.4 GHz) LED  
A solid white light indicates that the 2.4 GHz wireless band is enabled.

4 Wireless (5 GHz) LED  
A solid white light indicates that the 5 GHz wireless band is enabled.

5 USB 3.0 LED  
A solid white light indicates that a USB device is connected to the USB 3.0 port.

Choosing an Operation Mode

The DIR-885L is equipped with a software mode switch to give you more flexibility in how to configure your network. You may choose to operate this device in either **Router Mode** or **Access Point Mode**.

- **Router Mode** shares your Internet connection. This is the factory default setting suitable for most users.

- **Access Point Mode** extends your existing network. You may configure the DIR-885L to operate as an Access Point or a Media Bridge.

Determine your desired type of operation and adjust the mode switch before you begin your installation.

The following pages contain information about the DIR-885L's operation modes to help you determine how you wish to use it. This information includes usage scenarios, cable diagrams, and network configuration information.

**Note:** If the mode switch is adjusted while powered on, the DIR-885L will reboot into the new mode after five seconds.
Section 2 - Choosing an Operation Mode

Router Mode

In **Router Mode**, the DIR-885L AC3150 Ultra Wi-Fi Router operates as the central device of your network. This is the most common type of installation and is the factory default setting suitable for most users. The DIR-885L connects to your cable modem, DSL modem, or other Internet source and shares your Internet connection with your wired and wireless devices.

**Create a Home Network (Router Mode)**

![Diagram showing internet, broadband connection device, DIR-885L, and wired and wireless devices]

Use this mode for:
- Setting up a network for the first time.
- Replacing an existing router or network equipment.
- Adding a router to share a broadband connection which was previously connected to a single computer.

Place your DIR-885L near your broadband Internet connection device (e.g. DSL/Cable Modem) and connect to it via Ethernet cable.

To use your DIR-885L as a **Router**, refer to **Installation - Router** on page 13.
Access Point Mode

In **Access Point mode**, the DIR-885L may work with your existing networking equipment in two different ways:

In **Access Point Mode**, the DIR-885L works with your existing networking equipment to provide Wi-Fi for parts of your home or office that may have poor or no reception. You may use the DIR-885L as a wireless access point by connecting it to an uplink network via an Ethernet cable. This can be useful if you already have an existing router without built-in wireless capabilities or if your existing wireless signal can’t bridge the distance. Devices connected to the DIR-885L obtain IP addresses from the existing uplink network. To use your DIR-885L as an access point, install it in an area where you wish to get Wi-Fi, but is reachable by Ethernet cable from your uplink network.

**Existing Wi-Fi Coverage**

In **Media Bridge Mode**, the DIR-885L connects to your existing network wirelessly to provide connectivity to Ethernet devices. This can be useful if you cannot install Ethernet cable to your desired location or have devices which do not have wireless Ethernet. Devices connected to the DIR-885L obtain IP addresses from the existing uplink network. To use your DIR-885L as a media bridge, install it in an area where you can receive your wireless network signal.

**Wi-Fi Coverage with DIR-885L**
Access Point

Create a Wireless Network using Ethernet

The DIR-885L operates as an **Access Point** when the mode switch is in the **AP** position, the **Existing Network** is configured as **Ethernet** using the web configuration utility, and an Ethernet cable is connected from the WAN Ethernet Port to an uplink network.

Use this mode for:
- Extending your current network.
- Providing better signal for parts of your home or office that may have poor reception.
- Bringing Wi-Fi to an area it doesn’t currently reach.
- Adding Wi-Fi to a wired network.
- Maximizing bandwidth.
- Creating a Wi-Fi pocket away from your existing network.

**Note:** Extending a network to a desired location via Ethernet may require additional cable. The maximum length of Category 5/5E cables is limited to 100 meters (330 feet). Use a Gigabit-capable Ethernet connection where possible to ensure the best networking experience.

To use your DIR-885L as an **Access Point**, refer to **Installation - Access Point** on page 26.
Media Bridge

Use Wireless to Connect Ethernet Devices

The DIR-885L operates as a **Media Bridge** when the mode switch is in the **AP** position, the **Existing Network** is configured as **Media Bridge** using the web configuration utility, and is connected wirelessly to an uplink network.

Use this mode for:

- Extending your current network.
- Using Wi-Fi to bring network connectivity where you cannot install Ethernet cable.
- Creating a pocket away from your existing network.

Note: For each additional devices connected to the media bridge, total available amount of wireless bandwidth required increases.

To use your DIR-885L as a **Media Bridge**, refer to **Installation - Media Bridge** on page 30.
Section 3 - Installation - Router

Installation - Router

This section will walk you through the installation of the DIR-885L as a router using Router Mode.

Before you Begin

• Placement of the router is very important. Do not place the router in an enclosed area such as a closet, cabinet, attic, or garage.

• Configure the router with the computer that was last connected directly to your Internet connection. Verify that it is connected to the Internet before connecting additional devices.

• If your ISP provided you with a modem/router combo, you will need to set it to “bridge” mode so the router can work properly. Please contact your Internet Service Provider (ISP) or refer to the user manual for your modem/router device.

• You can only use the Ethernet port on your modem. If you were using the USB connection before using the router, then you must turn off your modem, disconnect the USB cable and connect an Ethernet cable to the Internet port on the router, and then turn the modem back on. In some cases, you may need to call your ISP to change connection types (USB to Ethernet).

• If connecting to a DSL modem, make sure to have your DSL service information provided by your Internet Service Provider handy. This information is likely to include your DSL account’s username and password. Your ISP may also supply you with additional WAN configuration settings which might be necessary to establish a connection.

• If you are connecting a considerable amount of networking equipment, it may be a good idea to take the time to label each cable or take a picture of your existing setup before making any changes.

• If you have DSL and are connecting via PPPoE, make sure you disable or uninstall any PPPoE software such as WinPoET, BroadJump, or EnterNet 300 from your computer or you will not be able to connect to the Internet.
Wireless Installation Considerations

The D-Link wireless router lets you access your network using a wireless connection from virtually anywhere within the operating range of your wireless network. Keep in mind that the number, thickness and location of walls, ceilings, or other objects that the wireless signals must pass through may limit the range. Typical ranges vary depending on the types of materials and background RF (radio frequency) noise in your home or business. The key to maximizing wireless range is to follow these basic guidelines:

1. Keep the number of walls and ceilings between the D-Link router and other network devices to a minimum - each wall or ceiling can reduce your adapter's range from 1 to 30 meters (3 to 90 feet). Position your devices so that the number of walls or ceilings is minimized.

2. Be aware of the direct line between network devices. A wall that is 0.5 meters (1.5 feet) thick, at a 45-degree angle appears to be almost 1 meter (3 feet) thick. At a 2-degree angle it looks over 14 meters (42 feet) thick! Position devices so that the signal will travel straight through a wall or ceiling (instead of at an angle) for better reception.

3. Building materials make a difference. A solid metal door or aluminum studs may have a negative effect on range. Try to position access points, wireless routers, and computers so that the signal passes through drywall or open doorways. Materials and objects such as glass, steel, metal, walls with insulation, water (fish tanks), mirrors, file cabinets, brick, and concrete will degrade your wireless signal.

4. Keep your product away at least 1 to 2 meters (3 to 6 feet) from electrical devices or appliances that generate RF noise.

5. If you are using 2.4 GHz cordless phones or X-10 (wireless products such as ceiling fans, lights, and home security systems), your wireless connection may degrade dramatically or drop completely. Make sure your 2.4 GHz phone base is as far away from your wireless devices as possible. The base transmits a signal even if the phone is not in use.
Section 3 - Installation - Router

Hardware Setup

1. The DIR-885L is designed to give you the fastest, most stable network connection possible. In order to maximize performance, fully extend the antennas to provide optimal wireless coverage. Keep the router in an open area for better wireless coverage. Inspect the mode switch to ensure that it is in the factory default ROUTER position. Adjust the switch if necessary.

2. Position your DIR-885L near your Internet-connected modem. Place it in an open area for better wireless coverage.

3. Turn off and unplug the power and Ethernet cable to your cable or DSL broadband modem. This is required. In some cases, you may need to turn it off for up to five minutes.
Hardware Setup (continued)

4. Use the included Ethernet cable to connect your modem to the yellow port labeled **INTERNET** on the router.

5. Turn on or plug your modem back in and wait approximately one minute before proceeding onward.

6. Connect the supplied power adapter to the router and a power outlet, press the power button, and verify that the power LED is lit. Allow 1 minute for the router to boot up.

**Note:** This unit is to be used with power supply model WA-36A12.
Hardware Setup (continued)

7. If you are configuring the DIR-885L wirelessly from a PC, connect to a Wi-Fi network printed on the included Wi-Fi configuration card. You can also find the Wi-Fi network names and passwords printed on the label attached to the bottom of your router.

If you are configuring the DIR-885L from a PC with a wired Ethernet connection, plug one end of an Ethernet cable into the port labeled 1 on the back of the router, and the other end into the Ethernet port on your computer.

8. If you are connecting to a broadband service that uses a dynamic connection (not PPPoE), you may be online already. Try opening a web browser and connecting to a website. If the website does not load, proceed to Completing Setup on page 18.
Completing Setup

There are several different ways you can configure your router to connect to the Internet and connect to your clients:

- **QRS Mobile App** - Use your Android device, iPhone, iPad, or iPod touch to configure your router, refer to QRS Mobile App on page 19.

- **D-Link Setup Wizard** - This wizard will launch when you log into the router for the first time, refer to Setup Wizard on page 20.

- **Manual Setup** - Log into the router and manually configure your router, refer to Router Mode on page 9.
QRS Mobile App

The QRS Mobile app allows you to install and configure your router from your mobile device.

**Note:** The screenshots may be different depending on your mobile device’s OS version.

**Step 1**
Search for the free **QRS Mobile App** on the App Store or Google Play.

**Step 2**
Once your app is installed, you may now configure your router. Connect to the router wirelessly by going to your wireless utility on your device. Scan for the Wi-Fi name (SSID) as listed on the supplied info card. Select and then enter your Wi-Fi password.

**Step 3**
Once you connect to the router, launch the QRS Mobile app from the Home screen of your device and follow the on-screen instructions.
Setup Wizard

If this is your first time installing the router, open your web browser and enter http://dlinkrouter.local/ in the address bar. Alternatively, enter the IP address of the router (default: http://192.168.0.1).

The wizard is designed to guide you through a step-by-step process to configure your new D-Link router and connect to the Internet.

Click Next to continue.

Please wait while your router detects your Internet connection type. If the router detects your Internet connection, you may need to enter your ISP information such as username and password.

If the router does not detect a valid Internet connection, a list of connection types to choose from will be displayed.

Select your Internet connection type (this information can be obtained from your Internet Service Provider) and click Next to continue.
Setup Wizard (continued)

If the router detected or you selected **PPPoE**, enter your PPPoE username and password and click **Next** to continue.

*Note: Make sure to remove your PPPoE software from your computer. The software is no longer needed and will not work through a router.*

If the router detected or you selected **Static**, enter the IP and DNS settings supplied by your ISP. Click **Next** to continue.
Setup Wizard (continued)

Create a Wi-Fi password (between 8-63 characters). Your wireless clients will need to have this passphrase or key entered to be able to connect to your wireless network.

Click **Next** to continue.

**Note:** The DIR-885L's Smart Connect feature presents a single wireless network. When connecting clients to an extension network, they will be automatically added to the best band, either 2.4 GHz or 5 GHz. To disable the Smart Connect feature and individually configure 2.4 GHz and 5 GHz networks, refer to **Wireless** on page 70.

In order to secure the router, please enter a new password. You will be prompted for this password every time you want to use the router’s web configuration utility. Click **Next** to continue.
You will be presented with a summary of your settings. Click **Next** to finalize the settings or **Back** to make changes.

To use the mydlink service (mydlink.com or the mydlink Lite app), you must have an account. Select **Yes** if you have a mydlink account already, or **No** if you want to create one. Click **Next** to continue.

If you do not want to register at this time, click **Skip**.
Setup Wizard (continued)

If you clicked **Yes**, enter your mydlink account name (email address) and password. Click **Next** to register your mydlink account with the router.

If you clicked **No**, fill out the requested information and click **Next** to create your mydlink account.
Setup Wizard (continued)

At the end of the wizard, you will be presented with a final summary of your settings. Click Finish to close the wizard. The device will reboot.

Congratulations, your device has been successfully configured!
Installation - Access Point

This section will walk you through the installation of the DIR-885L as an access point.

Before you Begin

• Configure the DIR-885L with the computer that was last connected directly to your Internet connection. Verify that it is connected to the Internet before connecting additional devices.

• If you are connecting a considerable amount of networking equipment, it may be a good idea to take the time to label each cable or take a picture of your existing setup before making any changes.
Wireless Installation Considerations

The D-Link wireless router lets you access your network using a wireless connection from virtually anywhere within the operating range of your wireless network. Keep in mind that the number, thickness and location of walls, ceilings, or other objects that the wireless signals must pass through may limit the range. Typical ranges vary depending on the types of materials and background RF (radio frequency) noise in your home or business. The key to maximizing wireless range is to follow these basic guidelines:

1. Keep the number of walls and ceilings between the D-Link router and other network devices to a minimum - each wall or ceiling can reduce your adapter’s range from 1 to 30 meters (3 to 90 feet). Position your devices so that the number of walls or ceilings is minimized.

2. Be aware of the direct line between network devices. A wall that is 0.5 meters (1.5 feet) thick, at a 45-degree angle appears to be almost 1 meter (3 feet) thick. At a 2-degree angle it looks over 14 meters (42 feet) thick! Position devices so that the signal will travel straight through a wall or ceiling (instead of at an angle) for better reception.

3. Building materials make a difference. A solid metal door or aluminum studs may have a negative effect on range. Try to position access points, wireless routers, and computers so that the signal passes through drywall or open doorways. Materials and objects such as glass, steel, metal, walls with insulation, water (fish tanks), mirrors, file cabinets, brick, and concrete will degrade your wireless signal.

4. Keep your product away at least 1 to 2 meters (3 to 6 feet) from electrical devices or appliances that generate RF noise.

5. If you are using 2.4 GHz cordless phones or X-10 (wireless products such as ceiling fans, lights, and home security systems), your wireless connection may degrade dramatically or drop completely. Make sure your 2.4 GHz phone base is as far away from your wireless devices as possible. The base transmits a signal even if the phone is not in use.
Hardware Setup

1. The DIR-885L is designed to give you the fastest, most stable network connection possible. In order to maximize performance, fully extend the antennas to provide optimal wireless coverage. Position your DIR-885L near where you wish to extend Wi-Fi to. Place it in an open area for better wireless coverage, but is still within range of your existing wired network using an Ethernet cable. Inspect the mode switch to ensure that it is in **AP** position. Adjust the switch if necessary.

![Antenna Position](image)

2. Connect the supplied power adapter to the DIR-885L and a power outlet.

![Power Connection](image)

**Note:** Extending the network to your desired location via Ethernet may require the purchase of additional cable. Maximum CAT5e cable length is limited to 100 meters. Use a Gigabit-capable Ethernet connection where possible to ensure the best networking experience. This unit is to be used with power supply model WA-36A12.

3. Press the power button, and verify that the power LED is lit. Allow 1 minute for the router to boot up.
Hardware Setup (continued)

4. Connect wired devices to the LAN ports on your DIR-885L. Connect wireless devices to the Wi-Fi network printed on the included Wi-Fi Configuration Card. You can also find the Wi-Fi network names and passwords printed on the label attached to the bottom your DIR-885L.

Congratulations, your device has been successfully configured!

If you wish to change the default wireless network names or passwords, refer to Configuration - Access Point Mode on page 101 for more information.
Installation - Media Bridge

This section will walk you through the installation of the DIR-885L as a Media Bridge.

Before you Begin

- Configure the DIR-885L with the computer that was last connected directly to your Internet connection. Verify that it is connected to the Internet before connecting additional devices.

- If you are connecting a considerable amount of networking equipment, it may be a good idea to take the time to label each cable or take a picture of your existing setup before making any changes.

- You may need to use trial and error to determine an acceptable placement location within range of your existing wireless network.
Wireless Installation Considerations

The D-Link wireless router lets you access your network using a wireless connection from virtually anywhere within the operating range of your wireless network. Keep in mind that the number, thickness and location of walls, ceilings, or other objects that the wireless signals must pass through may limit the range. Typical ranges vary depending on the types of materials and background RF (radio frequency) noise in your home or business. The key to maximizing wireless range is to follow these basic guidelines:

1. Keep the number of walls and ceilings between the D-Link router and other network devices to a minimum - each wall or ceiling can reduce your adapter’s range from 1 to 30 meters (3 to 90 feet). Position your devices so that the number of walls or ceilings is minimized.

2. Be aware of the direct line between network devices. A wall that is 0.5 meters (1.5 feet) thick, at a 45-degree angle appears to be almost 1 meter (3 feet) thick. At a 2-degree angle it looks over 14 meters (42 feet) thick! Position devices so that the signal will travel straight through a wall or ceiling (instead of at an angle) for better reception.

3. Building materials make a difference. A solid metal door or aluminum studs may have a negative effect on range. Try to position access points, wireless routers, and computers so that the signal passes through drywall or open doorways. Materials and objects such as glass, steel, metal, walls with insulation, water (fish tanks), mirrors, file cabinets, brick, and concrete will degrade your wireless signal.

4. Keep your product away at least 1 to 2 meters (3 to 6 feet) from electrical devices or appliances that generate RF noise.

5. If you are using 2.4 GHz cordless phones or X-10 (wireless products such as ceiling fans, lights, and home security systems), your wireless connection may degrade dramatically or drop completely. Make sure your 2.4 GHz phone base is as far away from your wireless devices as possible. The base transmits a signal even if the phone is not in use.
Hardware Setup

1. The DIR-885L is designed to give you the fastest, most stable network connection possible. In order to maximize performance, fully extend the antennas to provide optimal wireless coverage. Position your DIR-885L near where you wish to extend Wi-Fi to. Place it in an open area for better wireless coverage, but is still within range of your existing wired network using an Ethernet cable. Inspect the mode switch to ensure that it is in AP position. Adjust the switch if necessary.

2. Connect the supplied power adapter to the DIR-885L and a power outlet.

Note: Extending the network to your desired location via Ethernet may require the purchase of additional cable. Maximum CAT5e cable length is limited to 100 meters. Use a Gigabit-capable Ethernet connection where possible to ensure the best networking experience. This unit is to be used with power supply model WA-36A12.

3. Press the power button, and verify that the power LED is lit. Allow 1 minute for the router to boot up.
4. Connect wired devices to the LAN ports on your DIR-885L.

**Change to Media Bridge Mode**

To access the configuration utility, open a web-browser such as Internet Explorer and enter [http://dlinkrouter.local/](http://dlinkrouter.local/) or you may also connect by typing the IP address* of the DIR-885L in the address bar. The web configuration utility may also be accessed at the IP address **192.168.0.50** when in Access Point Mode, accessing this address requires setting static IP address for your computer in the **192.168.0.x** subnet.

*By default the DIR-885L in access point mode uses DHCP to obtain an IP address from your uplink network. If you are using multiple DIR-885Ls or D-Link devices, go to [http://dlinkrouterxxxx.local/](http://dlinkrouterxxxx.local/) as shown on the included Wi-Fi Configuration Card, with “xxxx” being the last four digits of the DIR-885L’s MAC address. The MAC address is also printed on the label on the bottom of the device.

If this is your first time configuring the DIR-885L, cancel out of the Setup Wizard by clicking on the X in the upper right hand corner. The Setup Wizard can only configures the device as an access point as of firmware 1.12.
The Home Page will open, click the Settings menu and select Extender.

Select Media Bridge from Existing Network.

You may either manually enter the SSID of the wireless network you would like to connect to or click the Scan button to search for available nearby networks.

Select the type of security the uplink network uses. Only None and WPA/WPA2-Personal are supported.

Enter the password for the uplink network and click Save. Allow approximately one minute for the device to reboot.

Congratulations, your device has been successfully configured. You may now connect additional wired devices to your DIR-885L.
Configuration - Router Mode

To access the configuration utility, open a web browser such as Internet Explorer and enter http://dlinkrouter.local/ or you may also connect by typing the IP address of the router (by default this is http://192.168.0.1) in the address bar.

Enter your password. If you previously followed the setup wizard, please use the admin password you entered during the wizard. Otherwise, leave the password blank. Click Log in to proceed.

**Note:** If you cannot remember your password and cannot log in, press the reset button on the back of the device for longer than 10 seconds to restore the router to its default settings.

If you are having trouble logging in or experiencing trouble with the configuration utility, try clearing your browser cache or try using your web browsers 'private browser' or incognito mode.

The router’s home page will open displaying its current connection status.

The bar at the top of the page has quick access to Settings and Management functions. You may quickly jump back Home at any time.

**Note:** The system will automatically log out after a period of inactivity.
Home

The Home page displays the current status of the router in the form of an interactive diagram. You can click each icon to display information about each part of the network at the bottom of the screen. The menu bar at the top of the page will allow you to quickly navigate to other pages.

The Home page displays the status of the router’s Internet connection. If it is disconnected, click **Click to repair** to bring up the setup wizard, refer to **Setup Wizard** on page 20 for more information.

Internet

To bring up more details about your Internet connection, click on the **Internet** icon. Click **IPv4** or **IPv6** to see details of the IPv4 connection and IPv6 connection respectively.

Click **Release** to disconnect from the Internet. If you do this and wish to reconnect, click **Renew**.

To reconfigure the Internet settings, refer to **Internet** on page 40.
Click on the **DIR-885L** icon to view details about the router and its wireless settings.

Here you can see the router’s current Wi-Fi network name and password, as well as the router’s MAC address, IPv4 address, and IPv6 address.

To reconfigure the network settings, either click **Go to settings** on the lower left, or click **Settings** (at the top of the page) and then **Network** on the menu that appears. Refer to **Network** on page 74 for more information.

To reconfigure the wireless settings, either click **Go to settings**, on the lower right, or click **Settings** (at the top of the page) and then **Wireless** on the menu that appears. Refer to **Wireless** on page 70 for more information.
Connected Clients

Click on the **Connected Clients** icon to view details about the router and its wireless settings.

On this page you can see all the clients currently connected to the router, and their IP addresses.

To edit each client’s settings, click the pencil icon on the client you want to edit.

You may also add rules for currently disconnected or powered off devices.

- **Name**: Enter a custom name for this client.
- **Vendor**: Displays the vendor of the device.
- **MAC Address**: Displays the MAC address of the device.
- **IP Address**: Displays the current IP address of this client.
- **Reserve IP**: Enable to reserve this IP address for this client.
- **IP Address (Reserved)**: Specify an IP address for the DIR-885L's DHCP server to assign each time the device is detected.
- **Parental Control**: Allow or block access to the router.
  
  Click **Save** when you are done.
Section 4 - Configuration - Router Mode

USB Device

Click on the USB Device icon to view details about the currently connected USB device, DLNA media server, SharePort, and Windows File Sharing.

If you have a USB device connected, you can see its name and how much free space it has.

To reconfigure the SharePort settings, either click **Go to settings** on the lower right, or click **Settings** (at the top of the page) and then **SharePort** on the menu that appears. Refer to **SharePort** on page 76 for more information.
Settings
Wizard

In the Settings menu on the bar on the top of the page, click **Wizard** to open the setup wizard. This is the same wizard that appears when you start the router for the first time. Refer to **Setup Wizard** on page 20 for details.

Internet

In the Settings menu on the bar on the top of the page, click **Internet** to see the Internet configuration options.

My Internet Connection Is: Choose your Internet connection type from the drop-down menu. You will be presented with the appropriate options for your connection type.

- For **Dynamic IP (DHCP)** refer to page 41.
- For **Static IP** refer to page 42.
- For **PPPoE** refer to page 43.
- For **PPTP** refer to page 45.
- For **L2TP** refer to page 47.
- For **DS-Lite** refer to page 49.

To configure an IPv6 connection, click the **IPv6** link. Refer to page 52.
Dynamic IP (DHCP)

Select **Dynamic IP (DHCP)** to obtain IP address information automatically from your Internet Service Provider (ISP). Select this option if your ISP does not specify an IP address to use.

- **My Internet Connection Is:** Dynamic IP (DHCP)

**Advanced Settings**

- **Host Name:** The host name is optional but may be required by some ISPs. Leave it blank if you are not sure.
- **Primary DNS Server:** Enter the primary DNS server IP address assigned by your ISP. This address is usually obtained automatically from your ISP.
- **Secondary DNS Server:** Enter the secondary DNS server IP address assigned by your ISP. This address is usually obtained automatically from your ISP.
- **MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your ISP.
- **MAC Address Clone:** The default MAC address is set to the Internet port's physical interface MAC address on the router. You can use the drop-down menu to replace the Internet port's MAC address with the MAC address of a connected client.
- **VLAN:** For more information on enabling the VLAN feature, refer to **VLAN Bridging** on page 51.

Click **Save** when you are done.
Static IP

Select **Static IP** if your IP information is provided by your Internet Service Provider (ISP).

- **My Internet Connection Is:** Static IP
- **IP Address:** Enter the IP address provided by your ISP.
- **Subnet Mask:** Enter the subnet mask provided by your ISP.
- **Default Gateway:** Enter the default gateway address provided by your ISP.
- **Primary DNS Server:** Enter the primary DNS server IP address assigned by your ISP.

**Advanced Settings**

- **Secondary DNS Server:** Enter the secondary DNS server IP address assigned by your ISP.
- **MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your ISP.
- **MAC Address Clone:** The default MAC address is set to the Internet port’s physical interface MAC address on the router. You can use the drop-down menu to replace the Internet port’s MAC address with the MAC address of a connected client.
- **VLAN:** For more information on enabling the VLAN feature, refer to VLAN Bridging on page 51.

Click **Save** when you are done.
Section 4 - Configuration - Router Mode

PPPoE

Select **PPPoE** if your ISP provides and requires you to enter a PPPoE username and password in order to connect to the Internet.

**My Internet Connection Is:** PPPoE

**Username:** Enter the username provided by your ISP.

**Password:** Enter the password provided by your ISP.

**Reconnect Mode:** Select either **Always-on**, **On-Demand**, or **Manual**.

**Maximum Idle Time:** Enter a maximum idle time during which the Internet connection is maintained during inactivity. To disable this feature, enable Auto-reconnect.

**Advanced Settings**

**Address Mode:** Select **Static IP** if your ISP assigned you the IP address, subnet mask, gateway, and DNS server addresses. In most cases, select **Dynamic IP**.

**Dynamic IP**

**Service Name:** Enter the ISP service name (optional).

**Primary DNS Server:** Enter the primary DNS server IP address assigned by your ISP.

**Secondary DNS Server:** Enter the secondary DNS server IP address assigned by your ISP.

**MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your ISP. The recommended setting is **Auto**.
**PPPoE (continued)**

**MAC Address Clone:** The default MAC address is set to the Internet port’s physical interface MAC address on the router. You can use the drop-down menu to replace the Internet port’s MAC address with the MAC address of a connected client.

**VLAN:** For more information on enabling the VLAN feature, refer to VLAN Bridging on page 51.

Click **Save** when you are done.

**Static IP**

**IP Address:** Enter the IP address provided by your ISP.

**Service Name:** Enter the ISP service name (optional).

**Primary DNS Server:** Enter the primary DNS server IP address assigned by your ISP.

**Secondary DNS Server:** Enter the secondary DNS server IP address assigned by your ISP.

**MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your ISP.

**MAC Address Clone:** The default MAC address is set to the Internet port’s physical interface MAC address on the router. You can use the drop-down menu to replace the Internet port’s MAC address with the MAC address of a connected client.

**VLAN:** For more information on enabling the VLAN feature, refer to VLAN Bridging on page 51.

Click **Save** when you are done.
PPTP

Choose PPTP (Point-to-Point-Tunneling Protocol) if your Internet Service Provider (ISP) uses a PPTP connection. Your ISP will provide you with a username and password.

**My Internet Connection Is:** PPTP

**PPTP Server IP Address:** Enter the PPTP server IP address provided by your ISP.

**Username:** Enter the username provided by your ISP.

**Password:** Enter the password provided by your ISP.

**Reconnect Mode:** Select either Always-on, On-Demand, or Manual.

**Maximum Idle Time:** Enter a maximum idle time during which the Internet connection is maintained during inactivity. To disable this feature, enable Auto-reconnect.

**Advanced Settings**

**Address Mode:** Select Static IP if your ISP assigned you the IP address, subnet mask, gateway, and DNS server addresses. In most cases, select Dynamic IP.
PPTP (continued)

**Dynamic IP**

- **Primary DNS Server:** Enter the primary DNS server IP address assigned by your ISP.
- **Secondary DNS Server:** Enter the secondary DNS server IP address assigned by your ISP.
- **MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your ISP. The recommended setting is **Auto**.

**Static IP**

- **PPTP IP Address:** Enter the IP address provided by your ISP.
- **PPTP Subnet Mask:** Enter the subnet mask provided by your ISP.
- **PPTP Gateway IP Address:** Enter the gateway IP address provided by your ISP.
- **Primary DNS Server:** Enter the primary DNS server IP address assigned by your ISP.
- **Secondary DNS Server:** Enter the secondary DNS server IP address assigned by your ISP.
- **MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your ISP. The recommended setting is **Auto**.

Click **Save** when you are done.
Choose L2TP (Layer 2 Tunneling Protocol) if your Internet Service Provider (ISP) uses a L2TP connection. Your ISP will provide you with a username and password.

- **My Internet Connection Is:** L2TP

- **L2TP Server IP Address:** Enter the L2TP server IP address provided by your ISP.

- **Username:** Enter the username provided by your ISP.

- **Password:** Enter the password provided by your ISP.

- **Reconnect Mode:** Select either **Always-on**, **On-Demand**, or **Manual**.

- **Maximum Idle Time:** Enter a maximum idle time during which the Internet connection is maintained during inactivity. To disable this feature, enable Auto-reconnect.

**Advanced Settings**

- **Address Mode:** Select **Static IP** if your ISP assigned you the IP address, subnet mask, gateway, and DNS server addresses. In most cases, select **Dynamic IP**.
L2TP (continued)

Dynamic IP

**Primary DNS Server:** Enter the primary DNS server IP address assigned by your ISP.

**Secondary DNS Server:** Enter the secondary DNS server IP address assigned by your ISP.

**MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your ISP. The recommended setting is **Auto**.

Static IP

**L2TP IP Address:** Enter the IP address provided by your ISP.

**L2TP Subnet Mask:** Enter the subnet mask provided by your ISP.

**L2TP Gateway IP Address:** Enter the gateway IP address provided by your ISP.

**Primary DNS Server:** Enter the primary DNS server IP address assigned by your ISP.

**Secondary DNS Server:** Enter the secondary DNS server IP address assigned by your ISP.

**MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your ISP. The recommended setting is **Auto**.

Click **Save** when you are done.
DS-Lite

DS-Lite is an IPv6 connection type. After selecting DS-Lite, the following parameters will be available for configuration:

My Internet Connection Is: DS-Lite

Advanced Settings

DS-Lite Configuration: Select DS-Lite DHCPv6 Option to let the router allocate the AFTR IPv6 address automatically. Select Manual Configuration to enter the AFTR IPv6 address manually.

DS-Lite DHCPv6

B4 IPv6 Address: Enter the B4 IPv4 address value used here.

WAN IPv6 Address: Once connected, the WAN IPv6 address will be displayed here.

IPv6 WAN Default Gateway: Once connected, the IPv6 WAN default gateway address will be displayed here.

Manual

AFTR IPv6 Address: Enter the AFTR IPv6 address used here.

B4 IPv4 Address: Enter the B4 IPv4 address value used here.

WAN IPv6 Address: Once connected, the WAN IPv6 address is displayed here.
DS-Lite (continued)

IPv6 WAN Default Gateway: Once connected, the IPv6 WAN default gateway address is displayed here.

Click **Save** when you are done.
VLAN Bridging

The VLAN bridging feature allows advanced users to enable 802.1Q VLAN tagging on the WAN interface. If you have an Ultra Fast Broadband (UFB) fiber optic connection, your ISP may offer High Priority Committed Information Rate (CIR). This guarantees the bandwidth required for real time voice and video applications.

In order to utilize the CIR, you must know the proper 802.1Q VLAN tags that your ISP uses. To enable this functionality, define the VLAN IDs, apply the VLAN to the desired interface, and connect your devices. Additional 802.1p tag configuration options will be available via future firmware update.

VLAN Bridge

- **Internet VLan ID**: Enter the VLAN ID for Internet traffic.
- **IPTV VLAN ID**: Enter the VLAN ID for IPTV traffic.
- **VoIP VLAN ID**: Enter the VLAN ID for VoIP traffic.

**WAN Connection**: Select the VLAN to apply to the corresponding interface.
IPv6

To configure an IPv6 connection, click the IPv6 link. To return to the IPv4 settings, click IPv4.

My Internet Connection Is: Choose your IPv6 connection type from the drop-down menu. You will be presented with the appropriate options for your connection type. Click Advanced Settings... to see additional configuration options.

For Auto Detection refer to page 53.

For Static IPv6 refer to page 55.

For Auto Configuration (SLAAC/DHCPv6) refer to page 57.

For PPPoE refer to page 59.

For IPv6 in IPv4 Tunnel refer to page 62.

For 6 to 4 refer to page 65.

For 6rd refer to page 67.

For Local Connectivity Only refer to page 69.
Section 4 - Configuration - Router Mode

Auto Detection

Select **Auto Detection** to automatically detect the IPv6 connection method used by your Internet Service Provider (ISP). If Auto Detection fails, you can manually select another IPv6 connection type.

**IPv6 DNS Settings**

- **DNS Type**: Select either **Obtain DNS server address automatically** or **Use the following DNS address**.

If **Use the following DNS address** is selected:

- **Primary DNS Server**: Enter the primary DNS server address.
- **Secondary DNS Server**: Enter the secondary DNS server address.

**LAN IPv6 Address Settings**

- **LAN IPv6 Address**: Displays the router’s LAN IPv6 Address link-local address.
- **LAN IPv6 Link-Local Address**: Displays the router’s LAN link-local address.

![IPv6 DNS Settings](image)

![IPv6 DNS Settings](image)
Auto Detection (continued)

Advanced Settings - Address Autoconfiguration Settings

Enable Automatic IPv6 Address Assignment:  Enable or disable the Automatic IPv6 Address Assignment feature.

Enable Automatic DHCP-PD in LAN:  Enable or disable DHCP-PD for other IPv6 routers connected to the LAN interface.  **Note:** This feature requires a smaller subnet prefix than /64 (i.e. allowing for a larger address allocation), such as /63. Contact your ISP for more information.

Autoconfiguration Type:  Select SLAAC+RDNSS, SLAAC+Stateless DHCP, or Stateful DHCPv6.

If you selected SLAAC+RDNSS or SLAAC+Stateless DHCP as the Autoconfiguration Type:

Router Advertisement Lifetime:  Enter the router address advertisement lifetime (in minutes).

If you selected Stateful DHCPv6 as the Autoconfiguration Type:

IPv6 Address Range (Start):  Enter the starting IPv6 address for the DHCP server’s IPv6 assignment.

IPv6 Address Range (End):  Enter the ending IPv6 address for the DHCP server’s IPv6 assignment.

IPv6 Advertisement Lifetime:  Enter the IPv6 address lifetime (in minutes).

Click **Save** when you are done.
Select **Static IP** if your IPv6 information is provided by your Internet Service Provider (ISP).

**Use Link-Local Address:** Enable or disable link-local address use.

**Default Gateway:** Enter the default gateway for your IPv6 connection.

**Primary DNS Server:** Enter the primary DNS server address.

**Secondary DNS Server:** Enter the secondary DNS server address.

If **Use Link-Local Address** is disabled these additional parameters are available for configuration:

**IPv6 Address:** Enter the address supplied by your ISP.

**Subnet Prefix Length:** Enter the subnet prefix length supplied by your ISP.

**LAN IPv6 Address Settings**

**LAN IPv6 Address:** Enter the LAN (local) IPv6 address for the router.

**LAN IPv6 Link-Local Address:** Displays the router’s LAN link-local address.
Static IPv6 (continued)

Advanced Settings - Address Autoconfiguration Settings

**Enable Automatic IPv6 Address Assignment:**
Enable or disable the Automatic IPv6 Address Assignment feature.

**Autoconfiguration Type:**
Select SLAAC+RDNSS, SLAAC+Stateless DHCP, or Stateful DHCPv6.

If you selected SLAAC+RDNSS or SLAAC+Stateless DHCP as the Autoconfiguration Type:

**Router Advertisement Lifetime:**
Enter the router address advertisement lifetime (in minutes).

If you selected Stateful DHCPv6 as the Autoconfiguration Type:

**IPv6 Address Range (Start):**
Enter the starting IPv6 address for the DHCP server’s IPv6 assignment.

**IPv6 Address Range (End):**
Enter the ending IPv6 address for the DHCP server’s IPv6 assignment.

**IPv6 Advertisement Lifetime:**
Enter the IPv6 address lifetime (in minutes).

Click **Save** when you are done.
Auto Configuration (SLAAC/DHCPv6)

Select **Auto Configuration** if your ISP assigns your IPv6 address when your router requests one from the ISP’s server. Some ISPs require you to adjust settings on your side before your router can connect to the IPv6 Internet.

**IPv6 DNS Settings**

- **DNS Type:** Select either **Obtain DNS server address automatically** or **Use the following DNS address**.

If **Use the following DNS address** is selected:

- **Primary DNS Server:** Enter the primary DNS server address.
- **Secondary DNS Server:** Enter the secondary DNS server address.

**LAN IPv6 Address Settings**

- **Enable DHCP-PD:** Enable or disable prefix delegation services.
- **LAN IPv6 Address:** If you disabled DHCP-PD, enter the LAN (local) IPv6 address for the router.
  - **LAN IPv6 Link-Local Address:** Displays the router’s LAN link-local address.
Advanced Settings - Address Autoconfiguration Settings

Enable Automatic IPv6 Address Assignment:
Enable or disable the Automatic IPv6 Address Assignment feature.

If DHCP-PD is available and enabled in LAN IPv6 Address Settings:
Enable Automatic DHCP-PD in LAN:
Enable or disable DHCP-PD for other IPv6 routers connected to the LAN interface. *Note: This feature requires a smaller subnet prefix than /64 (i.e. allowing for a larger address allocation), such as /63. Contact your ISP for more information.*

Autoconfiguration Type:
Select SLAAC+RDNSS, SLAAC+Stateless DHCP, or Stateful DHCPv6.

If you selected SLAAC+RDNSS or SLAAC+Stateless DHCP as the Autoconfiguration Type:
Router Advertisement Lifetime:
Enter the router address advertisement lifetime (in minutes).

If you selected Stateful DHCPv6 as the Autoconfiguration Type:
IPv6 Address Range (Start):
Enter the starting IPv6 address for the DHCP server’s IPv6 assignment.

IPv6 Address Range (End):
Enter the ending IPv6 address for the DHCP server’s IPv6 assignment.

IPv6 Advertisement Lifetime:
Enter the IPv6 address lifetime (in minutes).

Click **Save** when you are done.
Select **PPPoE** if your ISP provides and requires you to enter a PPPoE username and password in order to connect to the Internet.

**PPPoE Session:** Choose **Share with IPv4** to reuse your IPv4 PPPoE username and password, or **Create a new session**.

If you selected **Share with IPv4** configure the following options:

- **Address Mode:** Select **Static IP** if your ISP assigned you an IP address. In most cases, select **Dynamic IP**.
- **IP Address:** Enter the IP address provided by your ISP. (Static IP only)
- **MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your ISP.

If you selected **Create a new session**, configure the following options:

- **Username:** Enter the username provided by your ISP.
- **Password:** Enter the password provided by your ISP.
- **Address Mode:** Select **Static IP** if your ISP assigned you an IP address. In most cases, select **Dynamic IP**.
- **IP Address:** Enter the IP address provided by your ISP. (Static IP only)
- **Service Name:** Enter the ISP service name (optional).
- **Reconnect Mode:** Select either **Always On** or **Manual**.
- **MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your ISP.
Section 4 - Configuration - Router Mode

PPPoE (continued)

IPv6 DNS Settings

**DNS Type:** Select either **Obtain DNS server address automatically** or **Use the following DNS address.**

If **Use the following DNS address** is selected:

**Primary DNS Server:** Enter the primary DNS server address.

**Secondary DNS Server:** Enter the secondary DNS server address.

LAN IPv6 Address Settings

**Enable DHCP-PD:** Enable or disable prefix delegation services. This option is only available if you selected **Dynamic IP** for address mode.

**LAN IPv6 Address:** If DHCP-PD is disabled or static address mode is selected, enter the LAN (local) IPv6 address for the router.

**LAN IPv6 Link-Local Address:** Displays the router’s LAN link-local address.
Section 4 - Configuration - Router Mode

Advanced Settings - Address Autoconfiguration Settings

Enable Automatic IPv6 Address Assignment: Enable or disable the Automatic IPv6 Address Assignment feature.

If DHCP-PD is available and enabled in LAN IPv6 Address Settings:

Enable Automatic DHCP-PD in LAN: Enable or disable DHCP-PD for other IPv6 routers connected to the LAN interface. *Note: This feature requires a smaller subnet prefix than /64 (i.e. allowing for a larger address allocation), such as /63. Contact your ISP for more information.*

Autoconfiguration Type: Select SLAAC+RDNSS, SLAAC+Stateless DHCP, or Stateful DHCPv6.

If you selected SLAAC+RDNSS or SLAAC+Stateless DHCP as the Autoconfiguration Type:

Router Advertisement Lifetime: Enter the router address advertisement lifetime (in minutes).

If you selected Stateful DHCPv6 as the Autoconfiguration Type:

IPv6 Address Range (Start): Enter the starting IPv6 address for the DHCP server’s IPv6 assignment.

IPv6 Address Range (End): Enter the ending IPv6 address for the DHCP server’s IPv6 assignment.

IPv6 Advertisement Lifetime: Enter the IPv6 address lifetime (in minutes).

Click **Save** when you are done.
IPV6 in IPV4 Tunnel

The user can configure the IPv6 connection to run in IPv4 Tunnel mode. IPv6 over IPv4 tunnelling encapsulates IPv6 packets in IPv4 packets so that IPv6 packets can be sent over an IPv4 infrastructure.

- **Remote IPv4 Address:** Enter the IPv4 remote address you will use.
- **Remote IPv6 Address:** Enter the IPv6 remote address you will use.
- **Local IPv4 Address:** Displays the current local IPv4 address.
- **Local IPv6 Address:** Enter the IPv6 local address you will use.
- **Subnet Prefix Length:** Enter the subnet prefix length supplied by your ISP.

**IPv6 DNS Settings**

- **DNS Type:** Select either **Obtain DNS server address automatically** or **Use the following DNS address**.

If **Use the following DNS address** is selected:

- **Primary DNS Server:** Enter the primary DNS server address.
- **Secondary DNS Server:** Enter the secondary DNS server address.
IPv6 in IPv4 Tunnel (continued)

**LAN IPv6 Address Settings**

**Enable DHCP-PD:** Enable or disable prefix delegation services.

**LAN IPv6 Address:** If you disabled DHCP-PD, enter the LAN (local) IPv6 address for the router.

**LAN IPv6 Link-Local Address:** Displays the router’s LAN link-local address.

**Advanced Settings - Address Autoconfiguration Settings**

**Enable Automatic IPv6 Address Assignment:** Enable or disable the Automatic IPv6 Address Assignment feature.

If DHCP-PD is available and enabled in LAN IPv6 Address Settings:

**Enable Automatic DHCP-PD in LAN:** Enable or disable DHCP-PD for other IPv6 routers connected to the LAN interface. **Note:** This feature requires a smaller subnet prefix than /64 (i.e. allowing for a larger address allocation), such as /63. Contact your ISP for more information.

**Autoconfiguration Type:** Select SLAAC+RDNSS, SLAAC+Stateless DHCP, or Stateful DHCPv6.

If you selected SLAAC+RDNSS or SLAAC+Stateless DHCP as the Autoconfiguration Type:

**Router Advertisement Lifetime:** Enter the router address advertisement lifetime (in minutes).
IPv6 in IPv4 Tunnel (continued)

If you selected **Stateful DHCPv6** as the Autoconfiguration Type:

IPv6 Address Range (Start): Enter the starting IPv6 address for the DHCP server’s IPv6 assignment.

IPv6 Address Range (End): Enter the ending IPv6 address for the DHCP server’s IPv6 assignment.

IPv6 Advertisement Lifetime: Enter the IPv6 address lifetime (in minutes).

Click **Save** when you are done.
In this section the user can configure the IPv6 6 to 4 connection settings. 6to4 is an IPv6 address assignment and automatic tunneling technology that is used to provide unicast IPv6 connectivity between IPv6 sites and hosts across the IPv4 Internet.

**6to4 Address:** Displays the 6 to 4 address.

**6to4 Relay:** Enter the 6 to 4 relay supplied by your ISP.

**Primary DNS Server:** Enter the primary DNS server address.

**Secondary DNS Server:** Enter the secondary DNS server address.

**LAN IPv6 Address Settings**

**LAN IPv6 Address:** Enter the LAN (local) IPv6 address for the router.

**LAN IPv6 Link-Local Address:** Displays the router’s LAN link-local address.
Section 4 - Configuration - Router Mode

6to4 (continued)

Advanced Settings - Address Autoconfiguration Settings

Enable Automatic IPv6 Address Assignment:
Enable or disable the Automatic IPv6 Address Assignment feature.

Autoconfiguration Type:
Select SLAAC+RDNSS, SLAAC+Stateless DHCP, or Stateful DHCPv6.

If you selected SLAAC+RDNSS or SLAAC+Stateless DHCP as the Autoconfiguration Type:

Router Advertisement Lifetime:
Enter the router address advertisement lifetime (in minutes).

If you selected Stateful DHCPv6 as the Autoconfiguration Type:

IPv6 Address Range (Start):
Enter the starting IPv6 address for the DHCP server’s IPv6 assignment.

IPv6 Address Range (End):
Enter the ending IPv6 address for the DHCP server’s IPv6 assignment.

IPv6 Advertisement Lifetime:
Enter the IPv6 address lifetime (in minutes).

Click Save when you are done.
6rd

If your ISP uses the 6rd protocol for IPv6 connectivity, configure it using these options.

**Assign IPv6 Prefix:** Currently unsupported.

- **Primary DNS Server:** Enter the primary DNS server address.
- **Secondary DNS Server:** Enter the secondary DNS server address.

**6rd Manual Configuration**

- **Enable Hub and Spoke Mode:** Enable if you want to minimize the number of routes to the destination by using a hub and spoke method of networking.

**6rd Configuration:** Choose the **6rd DHCPv4 Option** to automatically discover and populate the data values, or **Manual Configuration** to enter the settings yourself.

If you selected **Manual configuration**, configure the following options:

- **6rd IPv6 Prefix:** Enter the 6rd IPv6 prefix and mask length supplied by your ISP.
- **WAN IPv4 Address:** Displays the router’s IPv4 address.
- **6rd Border Relay IPv4 Address:** Enter the 6rd border relay IPv4 address settings supplied by your ISP.

**LAN IPv6 Address Settings**

- **LAN IPv6 Address:** Displays the router’s LAN IPv6 Address link-local address.
  - **LAN IPv6 Link-Local Address:** Displays the router’s LAN link-local address.
6rd (continued)

Advanced Settings - Address Autoconfiguration Settings

Enable Automatic IPv6 Address Assignment: Enable or disable the Automatic IPv6 Address Assignment feature.

Autoconfiguration Type: Select SLAAC+RDNSS, SLAAC+Stateless DHCP, or Stateful DHCPv6.

If you selected Stateful DHCPv6 as the Autoconfiguration Type:

IPv6 Address Range (Start): Enter the starting IPv6 address for the DHCP server’s IPv6 assignment.

IPv6 Address Range (End): Enter the ending IPv6 address for the DHCP server’s IPv6 assignment.

IPv6 Advertisement Lifetime: Enter the IPv6 address lifetime (in minutes).

Click Save when you are done.
Local Connectivity Only

Local Connectivity Only allows you to set up a local IPv6 connection that does not connect to the Internet.

Advanced Settings

IPv6 ULA Settings

Enable ULA: Click here to enable Unique Local IPv6 Unicast Addresses (ULA) settings.

If you selected Enable ULA and Disabled Default ULA Prefix:

ULA Prefix: Enter your own ULA prefix.

Current IPv6 ULA Settings

Current ULA Prefix: Displays the current ULA prefix.

LAN IPv6 ULA: Displays the LAN's IPv6 ULA.

Click Save when you are done.
Wireless

From this page you can configure your wireless network settings.

**Smart Connect**

Smart Connect: When Smart Connect is enabled, the router automatically assigns devices to the ideal wireless network to improve performance.

Wi-Fi Name (SSID): Create a name for your wireless network using up to 32 characters.

Password: Create a password to use for wireless security. Wireless clients will need to enter this password to successfully connect to the network.

**Advanced Settings**

Security Mode: Choose None, WEP, or WPA/WPA2-Personal (recommended).

Transmission Power: Select the desired wireless transmission power.

Schedule: Use the drop-down menu to select a schedule to apply. The schedule may be set to Always Enable, or you can create your own schedules in the Schedules section. Refer to Schedule on page 94 for more information.

**Wi-Fi Protected Setup**

The easiest way to connect your wireless devices to the router is with Wi-Fi Protected Setup (WPS). Using WPS-PIN disabled by default due to security vulnerabilities.

WPS-PBC Status: Enable or disable WPS-PBC functionality.

WPS-PIN Status: Enable or disable WPS-PIN functionality.

Refer to the next page if you wish to disable Smart Connect or click Save when you are done.
Section 4 - Configuration - Router Mode

Wireless - Smart Connect Disabled

If Smart Connect is **Disabled** the following options are available:

**2.4GHz / 5GHz**

**Status:** Enable or disable the 2.4 GHz and 5 GHz wireless networks.

**Wi-Fi Name (SSID):** Create a name for your wireless network using up to 32 characters.

**Password:** Create a password to use for wireless security.

**Advanced Settings**

**Security Mode:** Choose **None, WEP, or WPA/WPA2-Personal** (recommended).

**802.11 Mode (2.4 GHz):** Select the desired wireless networking standards to use.

The available options for the 2.4 GHz wireless network are **Mixed 802.11b/g/n, Mixed 802.11g/n, 802.11n only.**

**802.11 Mode (5 GHz):** Select the desired wireless networking standards to use.

The available options for the 5 GHz wireless network are **Mixed 802.11a/n/ac, Mixed 802.11n/ac, 802.11ac only, Mixed 802.11a/n, Mixed 802.11n only, or 802.11a only.**

**Wi-Fi Channel:** Select the desired channel. The default is **Auto** (recommended).

**Transmission Power:** Select the desired wireless transmission power.

**Channel Width (2.4 GHz):** Select **Auto 20/40** if you are using both 802.11n and non-802.11n devices, or select **20 MHz** if you are not using any 802.11n devices.

**Channel Width (5 GHz):** Select **Auto 20/40/80** if you are using 802.11ac, 802.11n, and 802.11a devices, select **Auto 20/40** if you are using 802.11n and 802.11a devices, or select **20 MHz** if you are only using 802.11a devices.
Wireless - Smart Connect Disabled (continued)

**HT20/40 Coexistence:** (2.4 GHz):
Enable or disable HT20/40 Coexistence.

**Visibility Status:**
The default setting is **Visible**. Select **Invisible** if you do not want to broadcast the SSID of your wireless network.

**Schedule:**
Use the drop-down menu to select a schedule to apply. The schedule may be set to **Always Enable**, or you can create your own schedules in the **Schedules** section. Refer to **Schedule** on page 94 for more information.

**Wi-Fi Protected Setup**
The easiest way to connect your wireless devices to the router is with Wi-Fi Protected Setup (WPS). Using WPS-PIN disabled by default due to security vulnerabilities.

**WPS-PBC Status:**
Enable or disable WPS-PBC functionality.

**WPS-PIN Status:**
Enable or disable WPS-PIN functionality.

Click **Save** when you are done.
Guest Zone

The guest zone feature will allow you to create temporary zones that can be used by guests to access the Internet. These zones will be separate from your main wireless network. In the Settings menu on the bar on the top of the page, click Wireless, then click the Guest Zone link.

If Smart Connect is enabled the following options will be available:

Smart Connect

- **Status**: Enable or disable the Guest wireless network.
- **Wi-Fi Name (SSID)**: Create a name for your wireless network using up to 32 characters.
- **Password**: Create a password to use for wireless security.

If Smart Connect is disabled the following options will be available:

2.4GHz / 5GHz

- **Status**: Enable or disable the 2.4 GHz and 5 GHz wireless networks.
- **Wi-Fi Name (SSID)**: Create a name for your wireless network using up to 32 characters.
- **Password**: Create a password to use for wireless security.

Home Network Access

- **Internet Access Only**: Enabling this option will confine connectivity to the Internet, disallowing guests from accessing other local network devices.

Click Save when you are done.
This section will allow you to change the local network settings of the router and to configure the DHCP settings. In the Settings menu on the bar on the top of the page, click **Network**. Click **Advanced Settings...** to expand the list and see all of the options.

### Network Settings

**LAN IP Address:** Enter the IP address of the router. The default IP address is **192.168.0.1**. If you change the IP address, once you click **Save**, you will need to enter the new IP address in your browser to get back into the configuration utility.

**Subnet Mask:** Enter the subnet mask of the router. The default subnet mask is **255.255.255.0**.

**Management Link:** The default address to access the router’s configuration is **http://dlinkrouter.local/**. Here, you can replace **dlinkrouter** with a name of your choice.

**Local Domain Name:** Enter the domain name (optional).

**Enable DNS Relay:** Disable to transfer the DNS server information from your ISP to your computers. If enabled, your computers will use the router for a DNS server.
Network (continued)

Advanced Settings - DHCP Server

**Status:** Enable or disable the DHCP server.

**DHCP IP Address Range:** Enter the starting and ending IP addresses for the DHCP server’s IP assignment. **Note:** If you statically (manually) assign IP addresses to your computers or devices, make sure the IP addresses are outside of this range or you may have an IP conflict.

**DHCP Lease Time:** Enter the length of time for the IP address lease in minutes.

**Always Broadcast:** Enable this feature to broadcast your network’s DHCP server to LAN/WLAN clients.

Advanced Settings

**WAN Port Speed:** You may set the port speed of the Internet port to **10 Mbps, 100 Mbps, 1000 Mbps**, or **Auto** (recommended).

**UPnP:** Enable or disable Universal Plug and Play (UPnP). UPnP provides compatibility with networking equipment, software, and peripherals.

**IPv4 Multicast Stream:** Enable to allow IPv4 multicast traffic to pass through the router from the Internet.

**IPv6 Multicast Stream:** Enable to allow IPv6 multicast traffic to pass through the router from the Internet.

Click **Save** when you are done.
Section 4 - Configuration - Router Mode

SharePort

This page will allow you to set up access to files on an external USB device plugged into the router. You can do this through the local network or from the Internet using either a web browser or an app on your smartphone or tablet. In the Settings menu on the bar on the top of the page, click SharePort.

**DLNA Media Server**

**Status:** Enable or disable the DLNA media server function, allowing connected clients access to media files over the network.

**DLNA Media Server:** Choose a name for your DLNA media server so that it can be found.

**Windows File Sharing (SAMBA)**

**Status:** Enable or disable the Windows File Sharing function, allowing connected clients access to media files over the network.

**Windows File Sharing:** Choose either **Allow all users to access (no password)** or **Require router’s admin password** to specify whether the router’s password will be required for access.

**Web File Access**

**Web File Access:** Enable or disable remote access to files stored on a USB device plugged into the router through a web browser.

**Direct Links:** This area will display the HTTP and HTTPS links to connect to your SharePort drive through a web browser from a device on your network.

Click **Save** when you are done.
Create User

The Create User page allows you to manage SharePort user accounts. This page lists active user accounts, their current permissions, and access paths. Users without accounts are restricted to guest access which only has access to the “Guest” folder on the media server. A maximum of ten accounts (including “Admin”) can be registered at any given time.

If you wish to remove an account, click on the corresponding trash can icon in the Delete column. If you wish to edit an account, click on the corresponding pencil icon in the Edit column. If you wish to create a new account, click the Create User button. If you edit or create a user, the following options appear:

Create New User

- **User Name**: Enter the desired user name for the new account.
- **Password**: Enter the password which the user will need to enter when logging in.
- **Permission**: Select either Read Only or Read/Write to control whether the user can edit, add, or delete files on the device.
- **Folder**: Choose the parent folder for the user. Files and folders on a higher level will be unavailable. Giving a user “root” allows access to all files on the device. To change the selected folder, click Browse and browse to the desired folder.

Click OK when you are done. The new user should be added to the list of user accounts. To save the new list, click Save. To return to the SharePort page, click SharePort.
Enabling mydlink allows you to access and manage the mydlink-compatible devices on your network. This can be done either through a web browser or via the mydlink smartphone app.

This page allows you to sign in to an existing mydlink account, or sign up for a new account. In the Settings menu on the bar on the top of the page, click mydlink.

If you do not already have a mydlink account, click **No, I want to create a new mydlink account**. Enter out your email address (which will also function as your username), create a password, and enter your first and last name. Then, click **Sign Up** to create your new mydlink account.

If you already have a mydlink account, click **Yes, I have a mydlink account**. Enter your email address (which is also your username) and password. Then, click **Sign In** to register your existing mydlink account with your router.
Features
QoS Engine

This device features an advanced, yet easy-to-use Intelligent Quality of Service (iQoS) Engine. QoS allows you to prioritize Internet traffic to ensure a better web browsing experience in situations where bandwidth is limited or large numbers of devices are in use. The QoS Engine allows you to prioritize Internet traffic by selecting to either Manage by Application or Manage by Device. The drag and drop interface allows you to arrange which traffic is given higher priority.

When using Manage by Application, you can prioritize traffic across all of your devices. For example, you can give streaming media a higher priority than file downloads.

When using Manage by Devices, you can create a device hierarchy to give a higher priority to specific devices. For example, you can give a desktop computer a more responsive Internet experience than a tablet or mobile device.

Management type: Select either Manage by Application, Manage by Devices, or Off.

Uplink Speed (Mbps): This number indicates the maximum upload speed for determining the QoS rules. You may manually input or adjust this number.

Downlink Speed (Mbps): This number indicates the maximum download speed for determining the QoS rules. You may manually input or adjust this number.

Detect Bandwidth: Click this button to automatically test your Internet connection speed. After the test is complete, the Uplink Speed and Downlink Speed values populate automatically. Alternatively, you may manually set these numbers based on information provided by your ISP.

The following pages provide more detail and usage scenarios to help you improve your Internet experience.
Manage by Application

Manage by Application lets you prioritize specific kinds of traffic across all connected devices to optimize your Internet experience. Under Applications, there are six types of traffic cards: Streaming Media, Online Chat & Mail, Games, Web & Social Network, File Transfer & P2P, and Others. If some are off-screen, you can use the arrow icons on either side of the page to scroll through the cards.

One application can be assigned Highest priority.

Two applications can be assigned High priority.

Three applications can be assigned Medium priority.

If no applications types are explicitly assigned a priority, they will all be treated with equal priority. If some devices are not assigned a priority and others are, the unassigned application types will be treated with the lowest priority.

To assign a priority level to an application type, drag the desired card from the Applications list over an empty slot and release the mouse button. The card will remain in the slot. If you want to remove a priority assignment from an application type and return it to the Applications list, click the x icon in the top right of the card.

For example, if you are experiencing poor quality VoIP phone calls or video chat due to excessive downloads, you can use the configuration displayed to the right to prioritize your calls and chats over other application types.

Be sure to keep your router firmware updated as new application traffic definitions are included.

Click Save when you are done.
**Manage by Devices**

**Manage by Devices** lets you to prioritize Internet access on your network by device to ensure an optimum Internet experience. Under **Connected Clients** you can see cards which represent each device connected to your router. The arrow icons allow you to see any devices which may be off screen. Refer to **Connected Clients** on page 38 for information on renaming devices.

**One** device can be assigned **Highest** priority.

**Two** devices can be assigned **High** priority.

**Six** devices can be assigned **Medium** priority.

If no devices are explicitly assigned a priority, all devices are all treated with equal priority. If only some devices are assigned priorities, all unassigned devices are treated with the lowest priority.

To assign a priority level to a device, click and drag the device card from the **Connected Clients** list over an empty slot and release the mouse button. The card will remain in the slot. If you want to remove a priority assignment from a device and return it to the All Devices list, click the x icon in the top right of the device card.

In the example to the right Your PC is assigned highest priority, Your Home Theater PC and Your Mobile Phone are assigned high priority, Your Server is assigned medium priority, and the Excessive Downloader’s traffic is assigned to the lowest priority queue. In this scenario, the router allocates bandwidth to your **Your PC** first, then **Your Home Theater PC** and **Your Mobile Phone**, and then **Your Server**. Any remaining bandwidth is given to the **Excessive Downloader**.

**Manage by Devices** utilizes the unique MAC address of each device to enforce QoS rules.

Click **Save** when you are done.
Firewall Settings

The router's firewall protects your network from malicious attacks over the Internet. In the Features menu on the bar on the top of the page, click **Firewall Settings**. Click **Advanced Settings**... to expand the list and see all of the options.

- **Enable DMZ**: Enable or disable the Demilitarized Zone (DMZ). Enabling DMZ is not recommended.
- **DMZ IP Address**: If DMZ is enabled, enter the IP address of the client you wish to expose, or use the drop-down menu to quickly select it.
- **Enable SPI IPv4**: Enabling Stateful Packet Inspection (SPI) helps prevent cyber attacks by validating that the traffic passing through the session conforms to known patterns.
- **Enable Anti-Spoof Checking**: Enable this feature to protect your network from certain kinds of "spoofing" attacks.
- **IPv6 Simple Security**: Enable or disable IPv6 simple security.
- **IPv6 Ingress Filtering**: Enable or disable IPv6 ingress filtering.

![Firewall Settings screenshot]

Your router’s high-performance firewall feature continuously monitors Internet traffic, protecting your network and connected devices from malicious Internet attacks.

Enable SPI IPv4: Disabled
Enable Anti-Spoof Checking: Disabled
IPv6 Simple Security: Disabled
IPv6 Ingress Filtering: Disabled

Application Level Gateway (ALG) Configuration

PPTP: Enabled
IPSec (VPN): Enabled
RTSP: Enabled
SIP: Enabled

COPYRIGHT © 2016 D-Link
Firewall Settings (continued)

Advanced Settings - Application Level Gateway (ALG) Configuration

**PPTP:** Allows multiple machines on the LAN to connect to their corporate network using the Point-to-Point Tunneling protocol (PPTP) based VPNs.

**IPSec (VPN):** Allows VPN clients to connect to their corporate IPSec-based network. Some VPN clients support traversal of IPSec through NAT. This Application Level Gateway (ALG) may interfere with the operation of such VPN clients. If you are having trouble connecting with your corporate network, try turning this ALG off. Please check with the system administrator of your corporate network whether your VPN client supports NAT traversal.

**RTSP:** Allows applications that use Real Time Streaming Protocol (RTSP) to receive streaming media from the Internet.

**SIP:** Enabling Session Initiation Protocol (SIP) allows devices and applications using VoIP (Voice over IP). Some VoIP applications and devices have the ability to discover NAT devices and work around them. This ALG may interfere with the operation of such devices. If you are having trouble making VoIP calls, try turning this ALG off.

Click **Save** when you are done.
IPv4/IPv6 Rules

The IPv4/IPv6 Rules page contains advanced options that let you set rules to restrict IP traffic across your network or from your network to the Internet. To configure IPv4 rules, click IPv4 Rules from the Firewall Settings page. To configure IPv6 rules, click IPv6 Rules from the Firewall Settings page. To return to the main Firewall Settings page, click Advanced.

Use the drop-down menu to select whether you want to ALLOW or DENY the rules you create. You can also choose to turn filtering OFF.

If you wish to remove a rule, click on the corresponding trash can icon in the Delete column. If you wish to edit a rule, click on the corresponding pencil icon in the Edit column. If you wish to create a new rule, click the Add Rules button. Click Save when you are done. If you edit or create a rule, the following options will appear:

**Create New Rule**

- **Name:** Enter a name for the rule.
- **Source IP Address Range:** Enter the source IP address range that the rule will apply to, and using the drop-down menu, specify whether it is a WAN or LAN IP address.
- **Destination IP Address Range:** Enter the destination IP address range that the rule will apply to, and using the drop-down menu, specify whether it is a WAN or LAN IP address.
- **Port Range:** Select the protocol of the traffic to allow or deny (Any, TCP, or UDP) and then enter the range of ports that the rule will apply to.
- **Schedule:** Use the drop-down menu to select a schedule to apply. The schedule may be set to Always Enable, or you can create your own schedules in the Schedules section. Refer to Schedule on page 94 for more information.

Click Save when you are done.
Port Forwarding

Port forwarding allows you to specify a port or range of ports to open for specific devices on the network. This might be necessary for certain applications to connect through the router. In the Features menu on the bar on the top of the page, click Port Forwarding.

If you wish to remove a rule, click on its trash can icon in the Delete column. If you wish to edit a rule, click on its pencil icon in the Edit column. If you wish to create a new rule, click the Add Rules button. Click Save when you are done. If you edit or create a rule, the following options will appear:

Create New Rule

**Name:** Enter a name for the rule.

**Local IP:** Enter the IP address of the device on your local network which you wish to forward traffic to. Alternatively, select the device from the drop-down menu.

**TCP Port:** Enter the TCP ports to forward. You can enter a single port or a range of ports. Separate ports with a comma (for example: 24,1009,3000-4000).

**UDP Port:** Enter the UDP ports to forward. You can enter a single port or a range of ports. Separate ports with a comma (for example: 24,1009,3000-4000).

**Schedule:** Use the drop-down menu to select a schedule to apply. The schedule may be set to Always Enable, or you can create your own schedules in the Schedules section. Refer to Schedule on page 94 for more information.

Click Save when you are done.
Virtual Server

In some cases you may have two applications running on different devices which require the same public port. Virtual server allows you to remap a different external port to each device. To configure the virtual server, from the Port Forwarding page click **Virtual Server**. To return to the main Port Forwarding page, click **Port Forwarding**.

If you wish to remove a rule, click on its trash can icon in the Delete column. If you wish to edit a rule, click on its pencil icon in the Edit column. If you wish to create a new rule, click the **Add Rules** button. Click **Save** when you are done. If you edit or create a rule, the following options will appear:

Create New User

**Name**: Enter a name for the rule. Alternatively, select the protocol/Application from the drop-down menu.

**Local IP**: Enter the IP address of the computer on your local network that you want to allow the incoming service to. Alternatively, select the device from the drop-down menu.

**Protocol**: Select the protocol of the traffic to allow or deny (**TCP**, **UDP**, **Both**, or **Other**).

**Protocol Number**: If you entered **Other** above, enter the protocol number.

**External Port**: Enter the public port you want to open.

**Internal Port**: Enter the private port you want to open.

**Schedule**: Use the drop-down menu to select a schedule to apply. The schedule may be set to **Always Enable**, or you can create your own schedules in the **Schedules** section. Refer to **Schedule** on page 94 for more information.

Click **Save** when you are done.
Website Filter

The website filter settings allow you to block access to certain web sites. You can either create a list of sites to block, or create a list of sites to allow (with all other sites being blocked).

In the Features menu on the bar on the top of the page, click Website Filter.

If you want to create a list of sites to block, select **DENY computers access to ONLY these sites** from the drop-down menu. All other sites will be accessible. If you want to specify a list of sites to allow, select **ALLOW computers access to ONLY these sites** from the drop-down menu. All other sites will be blocked.

You may specify a maximum of fifteen web sites. To add a new site to the list, click Create New Rule. Next, under Website URL/Domain enter the URL or domain. If you wish to remove a rule, click on its trash can icon in the Delete column. If you wish to edit a rule, simply replace the URL or domain.

Click Save when you are done.
Static Routes

IPv4

The Static Routes section allows you to define custom routes to control how data traffic is moved around your network.

In the Features menu on the bar on the top of the page, click **Static Routes**. To configure IPv6 rules, click **IPv6** and refer to page 89. To return to the main IPv4 static routes page, click **IPv4**.

If you wish to remove a rule, click on its trash can icon in the Delete column. If you wish to edit a rule, click on its pencil icon in the Edit column. If you wish to create a new rule, click the **Add Rules** button. Click **Save** when you are done. If you edit or create a rule, the following options will appear:

Create New Rule

- **Name**: Enter a name for the rule.
- **Destination Network**: Enter the IP address of packets that will take this route.
- **Mask**: Enter the netmask of the route.
- **Gateway**: Enter your next hop gateway to be taken if this route is used.
- **Metric**: The route metric is a value from 1 to 16 that indicates the cost of using this route. A value 1 is the lowest cost and 15 is the highest cost.
- **Interface**: Select the interface that the IP packet must use to transit out of the router when this route is used.

Click **Save** when you are done.
IPv6

To configure IPv6 rules, on the Static Routes page click IPv6. To return to the main IPv4 static routes page, click IPv4.

If you wish to remove a rule, click on its trash can icon in the Delete column. If you wish to edit a rule, click on its pencil icon in the Edit column. If you wish to create a new rule, click the Add Rules button. Click Save when you are done. If you edit or create a rule, the following options will appear:

Create New Rule

Name: Enter a name for the rule.

DestNetwork: This is the IP address of the router used to reach the specified destination.

PrefixLen: Enter the IPv6 address prefix length of the packets that will take this route.

Gateway: Enter your next hop gateway to be taken if this route is used.

Metric: Enter the metric value for this rule here.

Interface: Select the interface that the IP packet must use to transit out of the router when this route is used.

Click Save when you are done.
**Dynamic DNS**

Most Internet Service Providers (ISPs) assign dynamic (changing) IP addresses. Using a Dynamic Domain Name Server (DDNS) service provider, people can enter your domain name in their web browser to connect to your server no matter what your IP address is. Owners of D-Link routers can use the dlinkdns service. In the Features menu on the bar on the top of the page, click **Dynamic DNS**.

**Enable Dynamic DNS:** Enabling dynamic DNS reveals further configuration options.

If you **Enabled Dynamic DNS**, the following options are available:

- **Status:** Displays the current DDNS connection status.

- **Server Address:** Enter the address of your DDNS server, or select one from the drop-down menu.

- **Host Name:** Enter the host name that you registered with your DDNS service provider.

- **User Name:** Enter your DDNS username.

- **Password:** Enter your DDNS password.

- **Time Out:** Enter a timeout time (in hours).

Click **Save** when you are done.

At the bottom of the page are the IPv6 host settings. To configure an IPv6 dynamic DNS host, refer to **IPv6 Host** on page 91.
IPv6 Host

The IPv6 host settings are found at the bottom of the Dynamic DNS page.

If you wish to remove a rule, click on its trash can icon in the Delete column. If you wish to edit a rule, click on its pencil icon in the Edit column. If you wish to create a new rule, click the Add Record button. Click Save when you are done. If you edit or create a rule, the following options will appear:

Create New Record

**Host Name:** Enter the host name that you registered with your dynamic DNS service provider.

**IPv6 Address:** Enter the IPv6 address of the dynamic DNS server. Alternatively, select the server device in the drop-down menu.

Click Save when you are done.
Quick VPN

This page will help you configure the Quick VPN feature of your router. For more information refer to Quick VPN on page 170. Before proceeding, ensure that your Internet connection is working properly. We recommend configuring Dynamic DNS before proceeding with Quick VPN setup. If your router is assigned an IP address from your ISP using DHCP, it may frequently change, requiring clients credentials to be set up again and a simple DDNS address will be easier than an IP address.

Configure the following options:

**L2TP over IPSec:** Enable or disable the Quick VPN server.

If you enable **Quick VPN**, the following options are available:

- **Username**: Enter a username between 1 and 15 characters.
- **Password**: Enter a password between 1 and 15 characters.
- **PSK**: Enter a passkey between 6 and 64 characters.

**Save Configuration To Local Hard Drive:** For Apple iOS devices and OS X: From a computer browser click this button to export a profile to simplify setup. E-mail this file as an attachment to your Apple mobile device or open the file in OS X.

**Authentication Protocol:** Choose the authentication protocol type: **MSCHAPv2**, **PAP**, or **CHAP**. **MSCHAPv2** is the default.

**MPPE:** Select the encryption cipher strength: **none**, **RC4-40**, or **RC4-128**. **RC4-128** is the default.

Click **Save** when you are done.
The Time page allows you to configure, update, and maintain the correct time on the internal system clock. From here you can set the time zone, the Network Time Protocol (NTP) server, and enable or disable daylight saving time.

In the Management menu on the bar on the top of the page, click **Time & Schedule**.

**Time Configuration**

- **Time Zone**: Select your time zone from the drop-down menu.
- **Time**: Displays the current date and time of the router.
- **Daylight Saving**: Enable or disable daylight saving time.

**Automatic Time Configuration**

- **Update Time Using an NTP Server**: Enable or disable to allow an NTP server on the Internet to synchronize the time and date with your router. If you enable this option, select an NTP server from the drop-down menu. To configure the router's time and date manually, disable this option and use the drop-down menus that appear to input the time and date.

Click **Save** when you are done.

To configure and manage your schedules, click **Schedule** and refer to **Schedule** on page 94.
Schedule

Some router functions can be controlled by being set according to a pre-configured schedule. To create, edit, or delete schedules, from the Time page click Schedule. To return to the Time page, click Time.

If you wish to create a new rule, click the Add Rules button. If you wish to edit a rule, click on the corresponding pencil icon in the Edit column. If you wish to remove a rule, click on the corresponding trash can icon in the Delete column. Click Save when you are done. If you edit or create a rule, the following screen will appear:

First, enter the name of your schedule in the Name field.

Each box represents one hour, with the time at the top of each column. To add a time period to the schedule, simply click on the start hour and drag to the end hour. You can add multiple days and periods of time to the schedule.

To remove a time period from the schedule, click on the x icon.

Click Save when you are done.
System Log

The router can keep a running log of events. This log can be sent to a Syslog server, or sent to your email address. In the Management menu on the bar on the top of the page, click System Log.

Log Settings

**System Log:** Click the Check System Log button to download a text file containing the system log.

SysLog Settings

**Enable Logging to Syslog Server:** Check this box to send the router logs to a SysLog Server.

If Logging to the Syslog Server is Enabled:

**Syslog Server IP Address:** Enter the IP address for the Syslog server. If the Syslog server is connected to the device, select it from the drop-down menu to automatically populate the field.

Email Settings

**Enable Email Notification:** If you want the logs to be automatically sent to an email address, enable this option.

If Email notification is Enabled:

**From E-mail Address:** Enter the email address your SysLog messages will be sent from.

**To E-mail Address:** Enter the email address your SysLog messages will be sent to.

**SMTP Server Address:** Enter your SMTP server address.
System Log (continued)

SMTP Server Port: Enter your SMTP server port.

Enable Authentication: Check this box if your SMTP server requires authentication.

Account Name: Enter your SMTP account name.

Password: Enter your SMTP account’s password.

E-mail Log When Full or On Schedule

Send On Full: If enabled, this option will set the router to send the log when it is full.

Send On Schedule: If is enabled, this option will set the router to send according to a set schedule.

Schedule: If you enable Send On Schedule, use the drop-down menu to select a schedule to apply. The schedule may be set to Always Enable, or you can create your own schedules in the Schedules section. Refer to Schedule on page 94 for more information.

Click Save when you are done.
Admin

This page will allow you to change the administrator (Admin) password and enable remote management. In the Management menu on the bar on the top of the page, click Admin. To load, save, reset settings, or reboot the router, click System and refer to System on page 98.

Admin Password

**Password:** Enter a new password for the administrator account. You will need to enter this password whenever you configure the router using a web browser.

**Enable Graphical Authentication (CAPTCHA):** Enables a challenge-response test to require users to type letters or numbers from a distorted image displayed on the screen to prevent hackers and unauthorized users from gaining access to your router's network settings.

Advanced Settings - Administration

**Enable HTTPS Server:** Check to enable HTTPS to connect to the router securely. Instead of using http://dlinkrouter.local./, you must use https://dlinkrouter.local./ to connect to your router.

**Enable Remote Management:** Remote management allows the DIR-885L to be configured from the Internet by a web browser. A password is still required to access the web management interface.

**Remote Admin Port:** Enter the port number you wish to use to access the DIR-885L's web configuration utility. Example: http://x.x.x.x:8080 where x.x.x.x is the Internet IP address of the DIR-885L and 8080 is the port used for the web management interface.

*Note:* If you enabled HTTPS Server and wish to access the router remotely and securely, you must enter https:// at the beginning of the address.

Click Save when you are done.
This page allows you to save the DIR-885L's current configuration, load a previously saved configuration, reset the router to its factory default settings, or reboot the DIR-885L.

From the Admin page, click **System**. To return to the Admin page, click **Admin**.

### System

**Save Settings To Local Hard Drive:**
This option allows you to save the current router configuration settings to a file on your computer.

**Load Settings From Local Hard Drive:**
This option allows you to load a previously saved router configuration file. This will overwrite the router's current configuration.

**Restore To Factory Default Settings:**
This option allows you to restore all configuration settings back to the settings that were in effect at the time the router was shipped from the factory. Any settings that have not been saved will be lost, including any rules that you have created. If you want to save the current router configuration settings, use the **Save Settings To Local Hard Drive** button above.

### Auto Reboot Configuration

**Reboot The Device:**
Click to reboot the router immediately.

**Auto Reboot:**
You may set the DIR-885L to automatically reboot at a set time. The options are **Never**, **Daily**, **Weekly**. You may set the hour using a 24 hour format, the minute, and the day you wish to have the DIR-885L automatically reboot.

Click **Save** when you are done.
Upgrade

This page allows you to upgrade the DIR-885L’s firmware or language pack, either automatically or manually. To manually upgrade the firmware or language pack, you must first download the relevant file from http://support.dlink.com.

In the Management menu on the bar on the top of the page, click Upgrade.

**Firmware**

**Firmware Information:** The current firmware’s version and date is displayed.

**Check for New Firmware:** Click this button to prompt the router to automatically check for a new firmware version. If a newer version is found, you will be prompted to install it.

**Upgrade Manually**

**Upgrade Firmware:** If you wish to upgrade the firmware manually, first download the firmware file you wish to upgrade to. Next, click the Upgrade Firmware button and browse to the file to install the new firmware. You can also browse to a language pack file to install a new language pack.
Statistics

On the Statistics page you can view the amount of traffic that has passed through the router on the WAN, LAN, and wireless segments.

In the Management menu on the bar on the top of the page, click **Statistics**.

You can view the **Internet**, **LAN**, **Wi-Fi 2.4 GHz**, or **Wi-Fi 5 GHz** statistics by clicking on the respective tabs at the top. The graph will update in real time. To clear the information on the graph, click **Clear**.

The traffic counter will reset if the device is rebooted.
Configuration - Access Point Mode

Settings

To access the configuration utility, open a web browser such as Internet Explorer and enter http://dlinkrouter.local./ or you may also connect by typing the IP address* of the DIR-885L in the address bar.

* By default the DIR-885L in access point mode will use DHCP to obtain an IP address from your uplink network. If you are using multiple DIR-885Ls or D-Link devices, go to http://dlinkrouterxxxx.local./ as shown on the included Wi-Fi Configuration Card, with “xxxx” being the last four digits of the DIR-885L's MAC address. The MAC address is also printed on the label on the bottom of the device. The web configuration utility may also be accessed at the IP address 192.168.0.50 when in Access Point Mode.

Enter your password. If you previously followed the setup wizard, please use the admin password you entered during the wizard. Otherwise, leave the password blank. Click Log In to proceed.

Note: If you cannot remember your password and cannot log in, press the reset button on the back of the device for longer than 10 seconds to restore the router to its default settings.

If you are having trouble logging in or experiencing trouble with the configuration utility, try clearing your browser cache or try using your web browser's 'private browser' or incognito mode.

The device's Home Page will open, giving you quick access to the DIR-885L's current status. The bar at the top of the page has quick access to the Home, Settings, and Management functions.

Note: The system will automatically log out after a period of inactivity.
Home

The Home page displays the current status of the DIR-885L in the form of an interactive diagram. You can click each icon to display information about each part of the network at the bottom of the screen. The menu bar at the top of the page will allow you to quickly navigate to other pages.

The Home page displays the status of the access point's Internet connection.

The Home page displays the status of the connection to the uplink network. If it is disconnected, click **Click to repair** to bring up the setup wizard. The Setup Wizard only configures the device to operate as an access point.
To see additional connection details, click on the **DIR-885L** icon. Your **Network** and **Wireless Network** settings are displayed at the bottom of the page.

Your DIR-885L’s MAC address, IPv4 address, and subnet mask are displayed. To reconfigure the network settings, click **Go to settings** and refer to **Network** on page 110.

The image to the right shows an example wireless network configuration with Smart Connect enabled. The wireless network status, names (SSIDs), and passwords are shown. To reconfigure the wireless settings click **Go to settings** and refer to **Wireless** on page 107.
Section 4 - Configuration - Access Point Mode

Connected Clients

Click on the **Connected Clients** icon to view details about the DIR-885L and its wireless settings.

On this page you can see all the clients currently connected to the DIR-885L, and their IP addresses.

To edit each client’s settings, click the pencil icon on the client you want to edit.

| **Name**: | Enter a custom name for this client. |
| **Vendor**: | Displays the vendor of the device. |
| **MAC Address**: | Displays the MAC address of the device. |
| **IP Address**: | Displays the current IP address of this client. |
| **Reserve IP**: | Enable to reserve this IP address for this client. |
| **IP Address (Reserved)**: | Specify an IP address for the DIR-885L's DHCP server to assign each time the device is detected. |
| **Parental Control**: | Allow or block access to the router. |

Click **Save** when you are done.
USB Device

Click on the USB Device icon to view details about the currently connected USB device, DLNA media server, SharePort, and Windows File Sharing.

If you have a USB device connected, you can see its name and how much free space it has.

To reconfigure the SharePort settings, either click **Go to settings**, on the lower right, or click **Settings** (at the top of the page) and then **SharePort** on the menu that appears. Refer to **SharePort** on page 111 for more information.
In the Settings menu on the bar on the top of the page, click Extender to see the access point mode configuration options. You may configure the Access Point to operate as either an Access Point or Media Bridge from this page.

**Existing Network**

- **Existing Network:** Select either Ethernet (Access Point) or Media Bridge.

If you select Ethernet (Access Point Mode) refer to Wireless on page 107.

If you select Media Bridge configure the following options:

- **Wi-Fi Name (SSID):** You may manually enter the SSID of the wireless network you would like to connect to or click the Scan button to search for available nearby networks.

- **Security:** Select the type of security the uplink network uses. Only None and WPA/WPA2-Personal are supported.

If Security is set to WPA/WPA2-Personal, enter the uplink network password:

- **Password:** Enter the password for the uplink network.

  Click Save when you are done. Please note that the DIR-885L's IP address may change, requiring you to log in again.
Section 4 - Configuration - Access Point Mode

Wireless

Smart Connect

**Smart Connect:** When Smart Connect is enabled, the router automatically assigns devices to the ideal wireless network to improve performance.

**Wi-Fi Name (SSID):** Create a name for your wireless network using up to 32 characters.

**Password:** Create a password to use for wireless security. Wireless clients will need to enter this password to successfully connect to the network.

Advanced Settings

**Security Mode:** Choose **None, WEP, or WPA/WPA2-Personal** (recommended).

**Transmission Power:** Select the desired wireless transmission power.

**Schedule:** Use the drop-down menu to select a schedule to apply. The schedule may be set to **Always Enable**, or you can create your own schedules in the Schedules section. Refer to **Schedule** on page 94 for more information.

Wi-Fi Protected Setup

The easiest way to connect your wireless devices to the router is with Wi-Fi Protected Setup (WPS). Using WPS-PIN is disabled by default due to security vulnerabilities.

**WPS-PBC Status:** Enable or disable WPS-PBC functionality.

**WPS-PIN Status:** Enable or disable WPS-PIN functionality.

Refer to the next page if you wish to disable Smart Connect or click **Save** when you are done.
If Smart Connect is **Disabled** the following options are available:

### 2.4GHz / 5GHz

**Status:** Enable or disable the 2.4 GHz and 5 GHz wireless networks.

**Wi-Fi Name (SSID):** Create a name for your wireless network using up to 32 characters.

**Password:** Create a password to use for wireless security.

### Advanced Settings

**Security Mode:** Choose **None**, **WEP**, or **WPA/WPA2-Personal** (recommended).

**802.11 Mode (2.4 GHz):** Select the desired wireless networking standards to use.

- The available options for the 2.4 GHz wireless network are **Mixed 802.11b/g/n**, **Mixed 802.11g/n**, **802.11n only**.

**802.11 Mode (5 GHz):** Select the desired wireless networking standards to use.

- The available options for the 5 GHz wireless network are **Mixed 802.11a/n/ac**, **Mixed 802.11n/ac**, **802.11ac only**, **Mixed 802.11a/n**, **Mixed 802.11n only**, or **802.11a only**.

**Wi-Fi Channel:** Select the desired channel. The default is **Auto** (recommended).

**Transmission Power:** Select the desired wireless transmission power.

**Channel Width (2.4 GHz):** Select **Auto 20/40 MHz** if you are using both 802.11n and non-802.11n devices, or select **20 MHz** if you are not using any 802.11n devices.
Wireless - Smart Connect Disabled (continued)

**Channel Width**

(5 GHz): Select **Auto 20/40/80 MHz** if you are using 802.11ac, 802.11n, and 802.11a devices, select **Auto 20/40 MHz** if you are using 802.11n and 802.11a devices, or select **20 MHz** if you are only using 802.11a devices.

**HT20/40 Coexistence:** Enable or disable HT20/40 Coexistence.

**Visibility Status:** The default setting is **Visible**. Select **Invisible** if you do not want to broadcast the SSID of your wireless network. Making your network invisible is not a form of security alone.

**Schedule:** Use the drop-down menu to select a schedule to apply. The schedule may be set to **Always Enable**, or you can create your own schedules in the **Schedules** section. Refer to **Schedule** on page 94 for more information.

**Wi-Fi Protected Setup**

The easiest way to connect your wireless devices to the router is with Wi-Fi Protected Setup (WPS). Using WPS-PIN disabled by default due to security vulnerabilities.

**WPS-PBC Status:** Enable or disable WPS-PBC functionality.

**WPS-PIN Status:** Enable or disable WPS-PIN functionality.

Click **Save** when you are done.
Network

This section allows you to change the local network settings of the access point, such as the configuration management link and device IP settings. In the Settings menu on the bar on the top of the page, click Network. Click Advanced Settings... to expand the list and see all of the options.

Network Settings

Management Link: The default address to access the router’s configuration is http://dlinkrouter.local./ Here, you can replace dlinkrouter with a name of your choice.

Advanced Settings - IPv4 Device Management Interface

My LAN Connection is: Select your device IP assignment type, either Dynamic IP (DHCP) or Static IP. If you select DHCP there is no further configuration.

If you select Static IP, configure the following IP information.

IP Address: Enter an IP address on the same subnet as your uplink router.

Subnet Mask: Enter the subnet mask used by your uplink router.

Default Gateway: Enter the IP address of your uplink router.

Primary DNS Server: Enter the IP address of your preferred primary DNS server, usually the IP address of your uplink router.

Secondary DNS Server: Enter the IP address of your preferred secondary DNS server, usually the IP address of your uplink router.

Click Save when you are done.
SharePort

This page will allow you to set up access to files on an external USB device plugged into the router. You can do this through the local network or from the Internet using either a web browser or an app on your smartphone or tablet. In the Settings menu on the bar on the top of the page, click SharePort.

**DLNA Media Server**

- **Status:** Enable or disable the DLNA media server function, allowing connected clients access to media files over the network.

- **DLNA Media Server:** Choose a name for your DLNA media server so that it can be found.

**Windows File Sharing (SAMBA)**

- **Status:** Enable or disable the Windows File Sharing function, allowing connected clients access to media files over the network.

- **Windows File Sharing:** Choose either **Allow all users to access (no password)** or **Require router’s admin password** to specify whether the router’s password will be required for access.

**Web File Access**

- **Web File Access:** Enable or disable remote access to files stored on a USB device plugged into the router through a web browser.

- **Direct Links:** This area will display the HTTP and HTTPS links to connect to your SharePort drive through a web browser from a device on your network.

Click **Save** when you are done.
Create User

The Create User page allows you to manage SharePort user accounts. This page lists active user accounts, their current permissions, and access paths. Users without accounts are restricted to guest access which only has access to the “Guest” folder on the media server. A maximum of ten accounts (including "Admin") can be registered at any given time.

If you wish to remove an account, click on the corresponding trash can icon in the Delete column. If you wish to edit an account, click on the corresponding pencil icon in the Edit column. If you wish to create a new account, click the **Create User** button. If you edit or create a user, the following options appear:

### Create New User

- **User Name:** Enter the desired user name for the new account.
- **Password:** Enter the password which the user will need to enter when logging in.
- **Permission:** Select either **Read Only** or **Read/Write** to control whether the user can edit, add, or delete files on the device.
- **Folder:** Choose the parent folder for the user. Files and folders on a higher level will be unavailable. Giving a user “root” allows access to all files on the device. To change the selected folder, click **Browse** and browse to the desired folder.

Click **OK** when you are done. The new user should be added to the list of user accounts. To save the new list, click **Save**. To return to the SharePort page, click **SharePort**.
Management

Time & Schedule

Time

The Time page allows you to configure, update, and maintain the correct time on the internal system clock. From here you can set the time zone, the Network Time Protocol (NTP) server, and enable or disable daylight saving time.

In the Management menu on the bar on the top of the page, click **Time & Schedule**.

Time Configuration

**Time Zone**: Select your time zone from the drop-down menu.

**Time**: Displays the current date and time of the router.

**Daylight Saving**: Enable or disable daylight saving time.

Automatic Time Configuration

**Update Time Using an NTP Server**: Enable or disable to allow an NTP server on the Internet to synchronize the time and date with your router. If you enable this option, select an NTP server from the drop-down menu. To configure the router’s time and date manually, disable this option and use the drop-down menus that appear to input the time and date.

Click **Save** when you are done.

To configure and manage your schedules, click **Schedule** and refer to **Schedule** on page 114.
Schedule

Some access point functions can be controlled by a pre-configured schedule. To create, edit, or delete schedules, from the Time page click **Schedule**. To return to the Time page, click **Time**.

If you wish to create a new rule, click the **Add Rules** button. If you wish to edit a rule, click on the corresponding pencil icon in the Edit column. If you wish to remove a rule, click on the corresponding trash can icon in the Delete column. Click **Save** when you are done. If you edit or create a rule, the following screen will appear:

First, enter the name of your schedule in the **Name** field.

Each box represents one hour, with the time at the top of each column. To add a time period to the schedule, simply click on the start hour and drag to the end hour. You can add multiple days and periods of time to the schedule.

To remove a time period from the schedule, click on the x icon.

Click **Save** when you are done.
System Log

The router can keep a running log of events. This log can be sent to a Syslog server, or sent to your email address. In the Management menu on the bar on the top of the page, click System Log.

Log Settings

**System Log:** Click the **Check System Log** button to download a text file containing your system log.

SysLog Settings

**Enable Logging to Syslog Server:** Check this box to send the router logs to a SysLog Server.

If logging to the Syslog Server is **Enabled:**

**Syslog Server IP Address:** Enter the IP address for the Syslog server. If the Syslog server is connected to the DIR-885L, select it from the drop-down menu to automatically populate the field.

Email Settings

**Enable Email Notification:** If you want the logs to be automatically sent to an email address, enable this option.

If Email notification is **Enabled:**

**From E-mail Address:** Enter the email address your SysLog messages will be sent from.

**To E-mail Address:** Enter the email address your SysLog messages will be sent to.

**SMTP Server Address:** Enter your SMTP server address.
System Log (continued)

SMTP Server Port: Enter your SMTP server port.

Enable Authentication: Check this box if your SMTP server requires authentication.

Account Name: Enter your SMTP account name.

Password: Enter your SMTP account's password.

E-mail Log When Full or On Schedule

Send On Log Full: If enabled, this option will set the router to send the log when it is full.

Send On Schedule: If is enabled, this option will set the router to send according to a set schedule.

Schedule: If you enable Send On Schedule, use the drop-down menu to select a schedule to apply. The schedule may be set to Always Enable, or you can create your own schedules in the Schedules section. Refer to Schedule on page 94 for more information.

Click Save when you are done.
Admin

This page will allow you to change the administrator (Admin) password and enable remote management. In the Management menu on the bar on the top of the page, click **Admin**. To load, save, reset settings, or reboot the router, click **System** and refer to **System** on page 118.

Admin Password

**Password:** Enter a new password for the administrator account. You will need to enter this password whenever you configure the router using a web browser.

**Enable Graphical Authentication (CAPTCHA):** Enables a challenge-response test to require users to type letters or numbers from a distorted image displayed on the screen to prevent hackers and unauthorized users from gaining access to your router’s network settings.

Advanced Settings - Administration

**Enable HTTPS Server:** Check to enable HTTPS to connect to the router securely. Instead of using `http://dlinkrouter.local/`, you must use `https://dlinkrouter.local/` to connect to your router.

Click **Save** when you are done.
System

This page allows you to save the DIR-885L's current configuration, load a previously saved configuration, reset the router to its factory default settings, or reboot the DIR-885L.

From the Admin page, click System. To return to the Admin page, click Admin.

System

**Save Settings To Local Hard Drive:** This option allows you to save the current router configuration settings to a file on your computer.

**Load Settings From Local Hard Drive:** This option allows you to load a previously saved router configuration file. This will overwrite the router's current configuration.

**Restore To Factory Default Settings:** This option allows you to restore all configuration settings back to the settings that were in effect at the time the router was shipped from the factory. Any settings that have not been saved will be lost, including any rules that you have created. If you want to save the current router configuration settings, use the **Save Settings To Local Hard Drive** button above.

**Auto Reboot Configuration**

**Reboot The Device:** Click to reboot the router immediately.

**Auto Reboot:** You may set the DIR-885L to automatically reboot at a set time. The options are **Never, Daily, Weekly**. You may set the hour using a 24 hour format, the minute, and the day you wish to have the DIR-885L automatically reboot.

Click **Save** when you are done.
Upgrade

This page allows you to upgrade the DIR-885L’s firmware or language pack, either automatically or manually. To manually upgrade the firmware or language pack, you must first download the relevant file from [http://support.dlink.com](http://support.dlink.com).

In the Management menu on the bar on the top of the page, click **Upgrade**.

**Firmware**

- **Firmware Information:** The current firmware’s version and date is displayed.
- **Check for New Firmware:** Click this button to prompt the router to automatically check for a new firmware version. If a newer version is found, you will be prompted to install it.

**Upgrade Manually**

- **Upgrade Firmware:** If you wish to upgrade the firmware manually, first download the firmware file you wish to upgrade to. Next, click the **Upgrade Firmware** button and browse to the file to install the new firmware. You can also browse to a language pack file to install a new language pack.
Applications
mydlink Lite Mobile App

The DIR-885L is mydlink-enabled, which gives you access to your home network no matter where you go. Now you can monitor and manage your home network right from your, iPhone®, iPad®, Android™ device, or Windows Phone. mydlink-enabled routers can be configured to send an email to keep you informed anywhere, anytime when new devices are connecting to your network or unwanted access is detected. Monitor in real-time websites that are being visited with recent browser history displayed on the mydlink™ Lite app – which is great for parents.

Download the free mydlink Lite app on your smartphone or tablet by scanning the QR code to the right, or by searching for mydlink Lite in the app store for your device.

Launch the mydlink Lite app, then create a new account or log in to your existing account.

The app will guide you through the rest of the configuration process.
mydlink SharePort

Using the mydlink SharePort™ app for iPad®, iPhone®, and iPod touch®

The mydlink SharePort™ app is a streamlined mobile application that allows you to conveniently stream media and share files stored on a removable storage connected to your router. Once the router is set up, you can start the app and easily connect from a local network or through the Internet to access your photos, videos, music, and documents. It allows you to create your own personal cloud storage. You can upload files and photos from your mobile device to the removable storage via the app from anywhere in the world!

**Note:** In order to ensure smooth streaming performance, you will need a minimum of 2 Mbit/s upload bandwidth for your router’s Internet connection. Streaming performance will vary depending on the quality of your Internet connection.

**Note:** If you choose to skip the mydlink SharePort registration during the initial setup of your DIR-885L, you may begin the registration process anytime by accessing the mydlink SharePort feature from within the router configuration. Please see page 73 for details on how to begin the mydlink shareport registration process.

If you are connecting remotely through the mydlink SharePort™ app from the Internet, you will need a mydlink account.

Make sure the device is powered on. Then plug your USB drive into the USB port of the device.

**Note:** If you connect a removable storage with many files or a large capacity, it may take a while for the router to scan and catalog your files.
Use your iPhone, iPad or iPod touch to search for and download the free mydlink SharePort app from the App Store.

If you have a QR code reader, you can scan the code for mydlink SharePort to the right.

Tap the mydlink SharePort icon, and the app will load.

Tap **Set up** to go to Settings and enter the Admin password and your mydlink Account Login information when the pop-up displays. Tap **Done** when your information is entered. (The Admin password is only for local access, if you can connect through the Internet, then you can leave the Admin password blank)
You can now use the mydlink SharePort app interface to stream media and access files stored on your removable drive. The wireless icon at the bottom will be lit green to indicate you are connected to the router through Remote Access. If you need to change your settings, tap the gear icon at the top right corner to enter the settings page.

If you have more than one device registered to your mydlink account, you can tap **Device List** (in the top-left corner) and you will be prompted to select the device you wish to use.

**Note:** If you see a red wireless icon, your router's network environment may not be suitable for a direct network connection and you may experience slow network speeds.
Using mydlink SharePort in a local network:

Make sure the device is powered on. Then plug your USB drive into the USB port of the device.

**Note:** If you connect a removable storage with many files or a large capacity, it may take a while for the router to scan and catalog your files.

Use your iPhone, iPad or iPod touch to search for and download the free **mydlink SharePort** app from the App Store.

If you have a QR code reader, you can scan the code for **mydlink SharePort** to the right.

On your mobile device, go to your Wi-Fi settings and connect to your router’s wireless network using the default Wi-Fi settings. Locate the Wi-Fi name (SSID) and password for your device as printed on the included Wi-Fi Configuration Card.

Tap the **mydlink SharePort** icon, and the app will load.
Section 5 - Applications

Tap **Set up** to enter the Admin password for your router when the pop-up displays.

Enter your Admin Login in the Password field and tap **Done**

You can now use the mydlink SharePort app interface to stream media and access files stored on your removable drive. The wireless icon at the bottom will be lit blue to indicate a Local Access connection. If you need to change your settings, tap the gear icon at the top right corner to enter the settings page.

**Note:** If you see a red wireless icon, your router’s network environment may not be suitable for a direct network connection and you may experience slow network speeds.
Main Menu

The mydlink SharePort main menu has different sections that let you see all the documents, photos, movies, or music stored on your removable storage. Tap < or >, or swipe left or right to move between the different sections. The Wi-Fi icon at the bottom indicates an active local network connection (blue) or remote connection (green/red). Tap Log In if it is not lit, or Log Out to return to the login page.

- Tap on the document icon to view documents.
- Tap the camera icon to view photos.
- Tap on the movie icon to play videos.
- Tap on the music icon to play audio files.
- Tap on the folder icon to browse all files in a folder view.
- Tap on the star icon to access your favorite files.
Documents

The Documents section allows you to share, print, and view documents streamed from your DIR-885L to your mobile device. Tap the document icon on the main menu to browse the documents on your mobile device.

**Search Bar:** Enter a filename here to search your storage.

- Tap to mark files for deletion.
- Tap the star icon next to each file to download it to your device and add it into your Favorites section.
- Tapping this icon gives you additional options:
  - **Mail:** Tap to e-mail the file.
  - **iCloud:** Tap to store the file on iCloud.
  - **AirPrint:** Tap to print the file.
  - **Open In...:** Tap to use a third-party app to open the file.

The bottom menu bar includes these options:

- Tap to go back to the main menu.
- Tap to update the list of files.
- Tap to reorder the files alphabetically.
Section 5 - Applications

Tap on a file to start the document viewer. In the viewer:

🌟 Tap to add/remove the file from your Favorites.
🗑 Tap to bring up the same options as >.

**Note:** Some files may require a third-party app to view them.
The Pictures section allows you to stream images from your DIR-885L to your mobile device. Tap the camera icon on the main menu to browse your photo collection on your removable storage.

**Search Bar:** Enter a filename here to search your storage.

- **Edit** Tap to mark files for deletion.
- **Tap to mark files for deletion.**
- **Tap to mark files for deletion.**

Tap the star icon next to each file to download it to your device and add it into your Favorites section.

- **Tap to mark files for deletion.**
- **Tap to mark files for deletion.**
- **Tap to mark files for deletion.**

Tapping this icon gives you additional options:

- **Mail:** Tap to e-mail the image.
- **iCloud:** Tap to store the image on iCloud.
- **AirPrint:** Tap to print the image.
- **Facebook:** Tap to upload the image to your Facebook account.
- **Twitter:** Tap to upload the image to your Twitter account.
- **Open In...:** Tap to use a third-party app to open the file.

The bottom menu bar includes these options:

- **Tap to go back to the main menu.**
- **Tap to go back to the main menu.**
- **Tap to go back to the main menu.**

Tap to start a slideshow of your photos. Tap the screen again to bring up the menu.

- **Tap to start a slideshow of your photos. Tap the screen again to bring up the menu.**
- **Tap to start a slideshow of your photos. Tap the screen again to bring up the menu.**

Tap to update the list of files.

- **Tap to update the list of files.**
- **Tap to update the list of files.**

Tap to reorder the files alphabetically.

- **Tap to reorder the files alphabetically.**
- **Tap to reorder the files alphabetically.**
Section 5 - Applications

Tap on a file to start the photo viewer. In the viewer:

- ★ Tap to add/remove the current image from your Favorites.
- Play Button Tap to start the slideshow.
- Right Tap to bring up the same options as >.
Videos

The Videos section allows you to stream video clips and movies from your DIR-885L to your mobile device. Tap the movie icon on the main menu to browse your videos on your removable storage.

**Search Bar:** Enter a filename here to search for a specific file.

- **Edit** Tap to mark files for deletion.
- **Tap the star icon next to a file to download it to your device and add it into your Favorites section.**

  Tapping this icon gives you additional options:
  - **Mail:** Lets you e-mail the file.
  - **iCloud:** Lets you store the file on iCloud.
  - **Open In...:** Lets you use a third-party app to open the file.

The bottom menu bar includes these options:

- **Tap to go back to the main menu.**
- **Tap to update the list of files.**
- **Tap to reorder the files alphabetically.**
Section 5 - Applications

Tap on a file to start playing it. In the player:

- Tap to play/pause the video. You can scroll to any time on the time line by holding and sliding your finger.
- Tap to enter/exit fullscreen mode.
- Tap to add/remove the file from your Favorites.
- Tapping this icon gives you additional options:
  - **Mail**: Lets you e-mail the video.
  - **iCloud**: Lets you store the video on iCloud.
  - **Open In...**: Lets you use a third-party app to open the file.
Section 5 - Applications

Music

The Music section allows you to stream songs from your DIR-885L to your mobile device. Tap the music icon on the main menu to browse your music collection on your removable storage.

**Search Bar:** Enter a filename here to search your storage.

- Tap to create a playlist and mark files for deletion.
- Tap the star icon next to each file to download it to your device and add it into your Favorites section.
- Tapping this icon gives you additional options:
  - **Mail:** Lets you e-mail the file.
  - **iCloud:** Lets you store the file on iCloud.
  - **Open In...:** Lets you use a third-party app to open the file.

The bottom menu bar includes these options:

- Tap to go back to the main menu.
- Tap to update the list of files.
- Tap to reorder the files alphabetically.
Section 5 - Applications

Tap on a file to start playing it. In the player:

- [ ] Tap to repeat all. Tap again to repeat a single song.
- [ ] Tap to skip to the previous/next song.
- [ ] Tap to enable/disable shuffle mode.

To create a playlist:

Tap Edit > Add Playlist.

Enter a name for the playlist, then tap Save.

The name of the playlist will appear in the browser next to the icon.
To add songs to a playlist:
   Tap the playlist in the browser.
   Tap **Add Music...** to add songs to the current playlist.
   Tick the songs you wish to add and tap **Done**.

To delete songs from the playlist:
   Tap **Edit** in the playlist browser and mark the files to be deleted.
   Tap **Delete**.
Folders

You can browse your removable storage in a folder view in the folders section. Tapping the filename will open the viewer/player for that file type as described in the previous pages. You can also upload files from your mobile device to the removable storage attached to your router.

**Search Bar:** Enter a filename here to search your storage.

- **Edit** Tap to take you to the editing screen where you can add a folder and mark files for deletion or copying.
- **Tap** Tap the star icon next to each file to download it to your device and add it into your Favorites section.
- **Tapping the > icon** gives you additional options depending on the file type.

The bottom menu bar includes these options:

- **Tap** to go back to the main menu.
- **Tap** to upload files from your device to your removable storage.
- **Tap** to update the list of files.
- **Tap** to reorder the files alphabetically.
Section 5 - Applications

To delete files:

Tap **Edit** at the top right.
Tick the circle next to a file to mark it for deletion.
Tap on **Delete** at the bottom to delete the file.

To copy files:

Tap on **Copy** to bring up a window where you can select the folder to copy to.
Browse to the directory you want to copy the marked files to and tap **Paste**.
You can also tap **Add Folder** to create a new folder.

To create a new folder:

Browse to the directory you wish to create a new folder in.
Tap **Edit** at the top right.
Tap **Add Folder** to add a new folder.
Enter the name of the new folder, then tap **Save**.
Tap **OK** to confirm folder creation.
Section 5 - Applications

To upload images and videos from your mobile device:

- Browse to the folder you wish to upload to.
- Tap **Upload** at the bottom.
- Select the photos/videos you wish to upload.
- Tap **Done**.

During the upload process, the size of the file and the upload progress will be displayed.

To upload more files, tap the + icon at the top right and repeat the steps listed above.
Favorites

The Favorites section allows you to quickly access your most often used files, no matter what file type, in a special section. Files added to the Favorites section will be copied here for playback in a centralized location.

Edit Tap to mark files for deletion from the local storage in Favorites. The file will still be accessible in other mydlink SharePort sections.

Tapping this icon gives you additional options depending on the file type.

The bottom menu bar includes these options:

Home Tap to go back to the main menu.

Refresh Tap to update the list of files.

Sort Tap to reorder the files alphabetically.

Tap on a file to start the file viewer. In the viewer:

Star Tap to add/remove the file from your Favorites.

Forward Tap to bring up additional options.

Note: The file options available will vary depending on the file type.
Using the mydlink SharePort™ app for Android™

The mydlink SharePort™ app is a streamlined mobile application that allows you to conveniently stream media and share files stored on a removable storage connected to your router. Once the router is set up, you can start the app and easily connect from a local network or through the Internet to access your photos, videos, music, and documents. It allows you to create your own personal cloud storage; you can upload files and photos from your mobile device to the removable storage via the app from anywhere in the world!

**Note:** In order to ensure smooth streaming performance, you will need a minimum of 2 Mbit/s upload bandwidth for your router’s Internet connection. Streaming performance will vary depending on the quality of your Internet connection.

If you are connecting remotely through the mydlink SharePort™ app from the Internet, you will need a mydlink account.

Make sure the device is powered on. Then plug your USB drive into the USB port of the device.

**Note:** If you connect a removable storage with many files or a large capacity, it may take a while for the router to scan and catalog your files.
3. Use your Android mobile device to search for and download the free mydlink SharePort app from Google Play™.

If you have a QR code reader, you can scan the code for mydlink SharePort to the right.

4. Tap the mydlink SharePort icon, and the app will load.

5. Tap **Set up** to go to Settings and enter the Admin password and your mydlink Account Login information when the pop-up displays. Tap **Apply** when your information is entered. (The Admin password is only for local access, if you can connect through the Internet, then you can leave the Admin password blank)
You can now use the mydlink SharePort app interface to stream media and access files stored on your removable drive. The wireless icon at the bottom will be lit green to indicate you are connected to the router through Remote Access.

If you have more than one device registered to your mydlink account, you can tap **Device List** (in the top-left corner) and you will be prompted to select the device you wish to use.

**Note:** If you see a red wireless icon, your router’s network environment may not be suitable for a direct network connection and you may experience slow network speeds.
Section 5 - Applications

**Using mydlink SharePort in a local network:**

1. Make sure the device is powered on. Then plug your USB drive into the USB port of the device.

**Note:** If you connect a removable storage with many files or a large capacity, it may take a while for the router to scan and catalog your files.

2. Use your Android mobile device to search for and download the free **mydlink SharePort** app from Google Play™.

   If you have a QR code reader, you can scan the code for **mydlink SharePort** to the right.

3. On your mobile device, go to your Wi-Fi settings and connect to your router’s wireless network using the default Wi-Fi settings. Locate the Wi-Fi name (SSID) and password for your device as printed on the included Wi-Fi Configuration Card.

**Note:** If you see a red wireless icon, your router’s network environment may not be suitable for a direct network connection and you may experience slow network speeds.
4. Tap the **mydlink SharePort** icon, and the app will load.

5. Tap **Set up** to enter the Admin password for your router when the pop-up displays.

6. Enter your Admin Login in the Password field and tap **Apply**. You will be taken back to the device list where you can select the device for use with mydlink SharePort.

7. You can now use the mydlink SharePort app interface to stream media and access files stored on your removable drive. The wireless icon at the bottom will be lit blue to indicate a Local Access connection.

**Note:** If you see a red wireless icon, your router’s network environment may not be suitable for a direct network connection and you may experience slow network speeds.
Main Menu

The mydlink SharePort main menu has different sections that let you see all the documents, photos, movies, or music stored on your removable storage. Tap < or >, or swipe left or right to move between the different sections. The Wi-Fi icon at the bottom indicates an active local network connection (blue) or remote connection (green/red). Tap **Log In** if it is not lit, or **Log Out** to return to the login page.

- Tap on the document icon to view documents.
- Tap the camera icon to view pictures.
- Tap on the movie icon to play videos.
- Tap on the music icon to play audio files.
- Tap on the folder icon to browse all files in a folder view.
- Tap on the star icon to access your favorite files.

**Note:** Available features may differ depending on the Android OS version of your device.
Documents

The Documents section allows you to share, print, and view documents streamed from your DIR-885L to your mobile device. Tap the document icon on the main menu to browse the files on your mobile device.

Search Bar: Type in the name of a file to search for it.

- Tap to return to the main menu.
- Tap to refresh, sort, or mark files for deletion.
- Tap the star icon next to each file to download it to your device and add it into your Favorites section.

Tap for additional options:

- Tap to return to the main menu.
- Tap to update the list of files.
- Tap to sort the files by name, size, type, or date.
- Check a file then tap to delete it.
Section 5 - Applications

Tap on a file to start the document viewer. In the viewer:
   Tap the screen to bring up zoom in/out buttons.
   Drag the screen up or down to scroll between pages.
   Tap [ ] to perform File, Find, Zoom, Reading View, Go To Page, and
   Bookmarks actions.

**Note:** Available actions may differ depending on your Android OS.
Section 5 - Applications

Pictures

The Pictures section allows you to view images streamed from your DIR-885L to your mobile device. Tap the camera icon on the main menu to browse your photo collection on your removable storage.

Search Bar: Type in the name of a file to search for it.

- Tap to return to the main menu.
- Tap to start a slideshow.
- Tap to refresh, sort, or mark files for deletion.
- Tap the star icon next to each file to download it to your device and add it into your Favorites section.

Tap for additional options:

- Tap to return to the main menu.
- Tap to update the list of files.
- Tap to sort the files by name, size, type, or date.
- Check a file then tap to delete it.
Section 5 - Applications

Tap on an image file to start the image viewer. In the viewer:

- Tap the star icon to download it to your device and add it into your Favorites section.
- Tap to start a slideshow. Tap the image to stop the slideshow.
- Tap to delete the current image. Tap OK to confirm.
- Tap to bring up additional options using other applications.
- Tap to access the image editor.

Note: This function may vary depending on the version of your Android OS.
Section 5 - Applications

Videos

The Videos section allows you to stream video clips and movies from your DIR-885L to your mobile device. Tap the movie icon on the main menu to browse your videos on your removable storage.

**Search Bar:** Type in the name of a file to search for it.

- Tap to return to the main menu.
- Tap to refresh, sort, or mark files for deletion.
- Tap the star icon next to a file to download it to your device and add it into your Favorites section.

Tap for additional options:

- Tap to return to the main menu.
- Tap to update the list of files.
- Tap to sort the files by name, size, type, or date.
- Check a file then tap this icon to delete it.
Section 5 - Applications

Tap on a file to start playing it. Tap on the screen to bring up the scroll bar, pause button, and play button.

- Tap to resume playback.
- Tap to pause the video.

Note: Available features may vary depending on the Android OS version installed on your device.
Music

The Music section allows you to stream songs from your DIR-885L to your mobile device. Tap the music icon on the main menu to browse your music collection on your removable storage.

**Search Bar:** Type in the name of a file to search for it.

- Tap to return to the main menu.
- Tap to refresh, sort, or mark files for deletion.
- Tap to browse your playlists.
- Tap the star icon next to a file to download it to your device and add it into your Favorites section.

Tap ⋮ for additional options:

- Tap to return to the main menu.
- Tap to update the list of files.
- Tap to sort the files by name, size, type, or date.
- Check a file then tap this icon to delete it.
Section 5 - Applications

Tap on a file to start playing it. In the player:

- Tap on the up/down arrow to show/hide the player controls.
- Tap to repeat all. Tap again to repeat a single song.
- Tap to skip to the previous/next song.
- Tap to play or pause the song.
- Tap to enable/disable shuffle mode.

To create a playlist:

- Tap \[\text{List} \]
- Tap \textbf{Add new playlist}...
- Enter a name for the playlist, then tap \textbf{OK}. The name of the playlist will appear in the browser next to the \[\text{List} \] icon.
- You can tap \[\text{List} \] then \[\text{List} \] to refresh the playlist page.
Section 5 - Applications

To add songs to a playlist:

Tap a playlist to see its contents.
Tap Add Music... to add songs to the current playlist.
Tick the songs you wish to add and tap to save.

To delete songs from the playlist:

Tap Edit in the playlist browser and mark the files to be deleted.
Tap then tap OK to confirm.
Section 5 - Applications

Folders

You can browse your removable storage in a folder view in the folders section. Tapping the filename will open the viewer/player for that file type as described in the previous pages. You can also upload files from your mobile device to the removable storage attached to your router.

**Search Bar:** Type in the name of a file to search for it.

- Tap to return to the main menu.
- Tap to access file options.

In the file browser:

- Tap to return to the main menu.
- Tap to upload files.
- Tap to refresh, sort, create a new folder, or mark files for deletion and copying.
Section 5 - Applications

Tap \[ \text{\textbullet} \] to select files and perform the following actions:

- Tap to update the list of files.
- Tap to sort the files by name, size, type, or date.
- Tap to create a new folder.
- Mark a file then tap this icon to delete it.
- Mark a file then tap this icon to copy it.

To delete files:

- Tap on \[ \text{\textbullet} \] and tick the box next to a file for deletion.
- Tap on \[ \text{\textbullet} \] to delete your selected files. Tap OK to confirm.

To copy files:

- Tap on \[ \text{\textbullet} \] to select files for copying. Tick the box next to each file for copying.
- Tap on \[ \text{\textbullet} \] to browse to the destination.
Section 5 - Applications

Tap **Paste** or **Cancel**.
You can also tap **New Folder** if you wish to create a folder in the current directory.

To create a new folder:
Browse to the directory you wish to create a new folder in.
Tap **⋯** then **+**.
Enter the name of the folder in the box, then tap **OK**.
To upload images and videos from your mobile device:

Browse to the folder you wish to upload to.

Tap and browse to the file or files you wish to upload from the local device.

Tick the box next to each of the files you wish to upload.

Tap **Upload**.

During the upload process, the size of the file and the upload progress will be displayed under the file name.

To remove a file from the upload queue, tap the X next to it.
The Favorites section allows you to quickly access your most often used files, no matter what file type, in a special section. Files added to the Favorites section will be copied here for playback in a centralized location.

**Search Bar:** Type in the name of a file to search for it.

- Tap to return to the main menu.
- Tap to refresh, sort, or mark files for deletion.

Tap for additional options:

- Tap to return to the main menu.
- Tap to update the list of files.
- Tap to sort the files by name, size, type, or date.
- Check a file then tap to delete it.
SharePort Plus

After you have successfully installed and configured your D-Link DIR-885L, you are ready to enjoy the benefits of D-Link’s SharePort Plus technology. D-Link’s SharePort Plus enabled devices allow you to quickly and easily share a USB printer or USB storage device among several PCs using D-Link’s SharePort Plus Utility Software.

Share a USB Printer

Note: To share a wireless printer, please refer to your printer’s installation documentation.

Install Your Printer To Each Computer

Before attaching your printer to your D-Link DIR-885L, directly install your USB printer to each of the computers you wish to share it with. Follow the setup instructions provided by your printer manufacturer. This ensures that your operating system installs the software drivers and utilities required for your printer to function properly with the SharePort Plus Utility.

Connect Your Printer To Your D-Link SharePort Plus Enabled DIR-885L

Move your printer near your D-Link SharePort Plus enabled DIR-885L. Plug in your printer’s power cord, turn it on, load some paper, and connect the printer’s USB cable to your DIR-885L’s USB port.
Windows PC Configuration

Install the SharePort Plus Utility on each Windows PC:

Visit dlink.com to download and install the latest version of the D-Link SharePort Plus Installation Utility. Upon successful installation, the SharePort Plus Utility will launch. Your PC will automatically attempt to connect to your D-Link SharePort Enabled DIR-885L and once successful, a list of connected USB devices will be displayed. If your printer is among the listed devices, a dialog box will automatically appear asking, “Would you like to configure auto print connect for this printer?”

To quickly set up your printer, click Yes.
The SharePort Plus utility will automatically configure your PC to print to the printer attached to your SharePort Plus enabled DIR-885L's USB port. A green check mark (✓) indicates that the printer is connected to your PC.

Congratulations, you are now ready to print! Remember, that only one PC or Mac may connect to the printer at a time.

If you need troubleshooting or wish to use the advanced configuration settings, please visit dlink.com to download the SharePort Plus User Manual.
Mac Configuration

Install the SharePort Plus Utility on each Mac:

Visit dlink.com to download and install the latest version of the D-Link SharePort Plus Installation Utility. Upon successful installation, the SharePort Plus Utility will launch. Your Mac will automatically try to connect to your D-Link SharePort Enabled DIR-885L and once successful a list of connected USB devices will be displayed. If your printer is among the listed devices, a dialog box will automatically appear, asking, “Would you like to configure auto print connect for this printer?” To quickly set up your printer, click Yes.
Section 5 - Applications

The SharePort Plus utility will automatically configure your computer to print to the printer attached to your SharePort Plus enabled DIR-885L's USB port. A green check mark (✓) indicates that the printer is connected to your Mac.

Congratulations, you are now ready to print! Remember, that only one PC or Mac may connect to the printer at a time.

If you need troubleshooting or wish to use the advanced configuration settings, please visit dlink.com to download the SharePort Plus user manual.
Share a USB Storage Device

The SharePort Plus Utility turns your USB Storage Device into a network drive that, once connected, will allow you to copy, move, delete, and edit files like you would with any ordinary drive attached to your computer.

**Connect Your USB Storage Device To Your D-Link DIR-885L**

Directly connect your USB storage device to your D-Link SharePort Plus enabled DIR-885L's USB port.

**Install the SharePort Plus Utility on each Windows PC or Mac:**

Visit dlink.com to download and install the latest version of the D-Link SharePort Plus Installation Utility. Upon successful installation, the SharePort Plus Utility will launch. Your PC or Mac will automatically try to connect to your D-Link SharePort Enabled DIR-885L and once successful, a list of connected USB devices will be displayed.
Connecting to your USB Storage Device from a Windows PC:

To access your files, right click your storage device and select **Open** or **Map network drive**. The drive’s contents will be displayed in Windows Explorer.

If a login prompt appears, enter your DIR-885L’s web configuration utility’s username and password you created when you set up your router.
Connecting to your USB Storage Device from a Mac:

To access your files, click on your storage device and press the connect button. The drive’s contents will be displayed in Finder.

If a login prompt appears, enter your DIR-885L’s web configuration utility’s username and password you created when you set up your router.
How to Safely Disconnect a USB Storage Device

From Each Windows Computer:

When you wish to disconnect your USB drive from your D-Link SharePort Plus enabled DIR-885L and ensure that no data is lost or corrupted, right click on the USB device in the SharePort Plus application and select **Safely remove**. You may then physically disconnect your USB storage device from your D-Link SharePort Plus device's USB port.
From Each Mac:
When you wish to disconnect your USB drive from your D-Link SharePort Plus enabled DIR-885L and ensure that no data is lost or corrupted, click on the USB storage device in the SharePort Plus application and press the disconnect button.

![SharePort Plus application screen](image)

Click yes to confirm you wish to stop using the device. You may then physically disconnect your USB storage device from your D-Link SharePort Plus device’s USB port.
Quick VPN

This router is equipped with D-Link's Quick VPN technology. Virtual Private Networking (VPN) creates a connection between devices across the Internet. Using Quick VPN allows you to securely connect your computer or mobile device to places with free, untrusted Wi-Fi hotspots in places like coffee shops and hotels by encrypting and relaying it through your home Internet connection. This extra 'hop' reduces the chances of hackers stealing your information, such as logins, passwords, and credit card numbers. When traveling, Quick VPN lets you watch sports and use video streaming services without experiencing blackouts or filtering. You can surf the whole Internet unfiltered and unblocked, just as you would at home.
Important Information

The following instructions explain and help you to configure your D-Link Quick VPN enabled router and devices to create a Virtual Private Network (VPN). This feature is provided for advanced users who wish to connect remotely and use their router's Internet connection to add a layer of security while using untrusted networks. Configure the Quick VPN Server on your router first and then set up client devices to connect through your router’s WAN connection.

- Quick VPN only provides an added layer of security against specific types of snooping attacks and does not guarantee complete data integrity or protection. Only traffic in the tunnel between your router and device will be encrypted, WAN traffic will leave your D-Link Quick VPN enabled router unencrypted.

- Keep your Quick VPN Username, Password, and Passkey safe. Keep your Quick VPN Username, Password, and Passkey safe. It is recommended that you change these credentials periodically.

- A device connected via Quick VPN tunnel may experience lower data throughput and higher latency due to a number of factors including: Internet conditions, local and remote network Wi-Fi and WAN bandwidth limitations, and increased latency. This may negatively impact real time voice and video communication.

- Quick VPN supports up to five concurrent VPN client sessions using the same login and password are supported. Quick VPN uses L2TP/IPsec with MSCHAPv2, PAP, or CHAP authentication.

- You device may warn you that your information may be intercepted, since you control the Quick VPN server, you may ignore this.

- UDP Ports 500, 4500, 1701 and IP Port 50 must be open in order for Quick VPN to work.

- L2TP/IPsec VPN usage may be restricted in some countries and on some networks. If you have trouble using Quick VPN on some networks, but not others and are not violating network access rules, try contacting your ISP or network administrator.

- Devices connected via Quick VPN are assigned addresses on a separate subnet (ex. 192.168.1.x). Some network resources may be unavailable when connecting via Quick VPN.

- If your Internet connection uses DHCP, it is strongly recommended that you first set up Dynamic DNS (DDNS), such as D-Link DDNS, to eliminate the need to reconfigure client devices in the event your ISP assigns you a new WAN IP address.
Quick VPN Server Setup Instructions

Configure the following options:

- **L2TP over IPSec**: Enable or disable the Quick VPN server.

If you enable **Quick VPN**, the following options are available:

- **Username**: Enter a username between 1 and 15 characters.
- **Password**: Enter a password between 1 and 15 characters.
- **PSK**: Enter a passkey between 6 and 64 characters.

**Save Configuration To Local Hard Drive**:

- **For Apple iOS devices and OS X**: From a computer browser click this button to export a profile to simplify setup. E-mail this file as an attachment to your Apple mobile device or open the file in OS X.

**Authentication Protocol**:

- Choose the authentication protocol type: **MSCHAPv2**, **PAP**, or **CHAP**. **MSCHAPv2** is the default.

**MPPE**:

- Select the encryption cipher strength: **none**, **RC4-40**, or **RC4-128**. **RC4-128** is the default.

Click **Save** when you are done.

Click **Save** and proceed to client setup pages.
Section 6 - Quick VPN

iOS Devices
VPN Setup Instructions

This section provides Quick VPN setup instructions for iOS devices using the Export Profile function. Refer to Quick VPN Server Setup Instructions on page 172 for more information.

Open the e-mail containing your Quick VPN profile.

Open the attachment.
VPN Setup Instructions (Continued)

The Install Profile dialog will appear, tap **Install** in the upper right hand corner of your screen.

Enter your device's passcode when prompted.

---

---
Section 6 - Quick VPN

VPN Setup Instructions (Continued)

Acknowledge the disclaimer by tapping Install in the upper right hand corner. Tap the red Install button.

Enter the Shared Secret (PSK) from the Quick VPN configuration page. Tap Done.

Your iOS device is now configured to connect to your Quick VPN server.
Connect or Disconnect

To connect or disconnect from your Quick VPN server, open **Settings** and tap the button next to **VPN**.

The VPN icon will appear in the notification area at the top of your screen indicating that your device is currently connected to the Quick VPN server.
Mac OS X
VPN Setup Instructions

This section provides Quick VPN setup instructions for OS X using the Export Profile function. Refer to Quick VPN Server Setup Instructions on page 172 for more information.

Open the exported profile. The Install Profile dialog will appear; click Continue and Install.

Enter your user account password when prompted. Close the Profiles dialog.

Go to System Preferences... > Network and select the Quick VPN connection and click Authentication Settings.
Enter your **Passkey** in the **Shared Secret** text box and click **OK, Apply**, then **OK**.

Your Mac is now configured to connect to your Quick VPN server.
Connect or Disconnect

To connect to or disconnect from your Quick VPN server, go to System Preferences... > Network.

Select the Quick VPN connection and click on the Connect or Disconnect button.
Click the **Start** button and type **vpn** into the **Search programs and files** box.

Select **Set up a virtual private network (VPN) connection**.

Enter the **IP/DDNS address** of your Quick VPN server in the **Internet address** box, create a name for your connection in the **Destination Name**, check **Don't Connect now; just set it up so I can connect later**, and click **Next**.
Enter your **Username**. If you would like windows to save your password, enter your **Password** and check **Remember this password**. Click **Create** to continue.

**Do not click Connect Now.**

Click **Close**. Click the **Start** button and type **view network connections** into the **Search programs and files** text box. Select **View network connections**.
Click **Advanced settings**. Enter your **Passkey** in the **Key** text box under **Use preshared key for authentication**. Click **OK** to close **Advanced Properties** and click **OK** to close **Quick VPN Connection Properties**.

Your Windows 7 system is now configured to connect to your Quick VPN server.
Connect or Disconnect

To connect to or disconnect from your Quick VPN server, click on the **Network Settings** icon in the notification area of the Windows taskbar and from the **Dial Up and VPN** section click on your Quick VPN connection and click on the **Connect** or **Disconnect** button.
This section provides Quick VPN setup instructions for Windows 8.1/8.

Click the **Start** button and type **vpn**.

Select **Manage virtual private networks**.

From the Network Settings page, click **Add a VPN Connection**.
Add a VPN Connection

1. Select **Microsoft** from **VPN Provider**.
2. Create a name for your VPN connection.
3. Enter your **IP/DDNS address** of your Quick VPN server.
4. Select **User name and password** from **Type of sign-in info**.
5. If you would like Windows to remember your sign-in information, enter your **User name**, **Password**, and select **Remember my sign-in info**.
6. Choose **Save**.

```
<table>
<thead>
<tr>
<th><strong>Add a VPN Connection</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1.</strong> Select <strong>Microsoft</strong> from <strong>VPN Provider</strong>.</td>
</tr>
<tr>
<td><strong>2.</strong> Create a name for your VPN connection.</td>
</tr>
<tr>
<td><strong>3.</strong> Enter your <strong>IP/DDNS address</strong> of your Quick VPN server.</td>
</tr>
<tr>
<td><strong>4.</strong> Select <strong>User name and password</strong> from <strong>Type of sign-in info</strong>.</td>
</tr>
<tr>
<td><strong>5.</strong> If you would like Windows to remember your sign-in information, enter your <strong>User name</strong>, <strong>Password</strong>, and select <strong>Remember my sign-in info</strong>.</td>

</table>
```
VPN Setup Instructions (Continued)

Right-click on the Quick VPN Connection you just created and left-click on **Properties**.

Select the **Security** tab. For the **Type of VPN**, select **Layer 2 Tunneling with IPsec (L2TP/IPSec)**.
Section 6 - Quick VPN

VPN Setup Instructions (Continued)

Click the **Start** button and type **view network connections**.

Select **View network connections**.

Right-click your **Quick VPN Connection** and left-click **Properties**. Select the **Security** tab.

For the **Type of VPN**, select **Layer 2 Tunneling with IPsec (L2TP/IPSec)**.
Click **Advanced settings**. Enter your **Passkey** in the **Key** text box under **Use preshared key for authentication**.

Click **OK** to close **Advanced Properties** and click **OK** to close **Quick VPN Properties**.

Your Windows 8.1/8 system is now configured to connect to your Quick VPN server.
Connect or Disconnect

To connect to or disconnect from your Quick VPN server, click on the **Network Settings** icon in the notification area of the Windows taskbar. Click on your Quick VPN connection and click on the **Connect** or **Disconnect** button.
Windows 10
VPN Setup Instructions

This section provides Quick VPN setup instructions for Windows 10.

Click **Start > Settings > Network & Internet > Network and Sharing Center > VPN > Add a VPN Connection**.
Add a VPN Connection

1. Select Windows (built-in) from the VPN Provider drop down menu.
2. Create a name for your VPN connection.
3. Enter your IP/DDNS address of your Quick VPN server.
4. Select L2TP/IPSec with pre-shared key from VPN type.
5. Enter the Passkey.
6. Select User name and password from Type of sign-in info.
   If you would like windows to remember your sign-in information, enter your User name, Password, and select Remember my sign-in info
7. Choose Save.

Your Windows 10 system is now configured to connect to your Quick VPN server.
Connect or Disconnect

To connect to or disconnect from your Quick VPN server, click on the Network Settings icon in the notification area of the Windows taskbar and click on your Quick VPN connection. The Network & Internet Settings page will open. Click on the Connect or Disconnect button.
Section 6 - Quick VPN

Android
VPN Setup Instructions

This section provides Quick VPN setup instructions for Android devices. Your device's screens may vary.

Go to Settings > More from the Wireless & networks > VPN > +
Edit VPN Profile

1. Enter a name for your VPN connection.
2. Select **L2TP/IPSec** PSK for **Type**.
3. Enter the **IP/DDNS address** of your Quick VPN server.
4. Enter your **Passkey** in **IPSec pre-shared key** field.
5. Choose **Save**.

Your Android device is now configured to connect to your Quick VPN server.
Connect or Disconnect

To connect to or disconnect from your Quick VPN server, go to Settings > More from the Wireless & networks > VPN and select the Quick VPN connection you created.
Connect or Disconnect (Continued)

To connect, enter your **Username** and **Password** and select **CONNECT**.

![Connect to Quick VPN](image)

To disconnect, select **DISCONNECT**.

![VPN is connected](image)
Connecting a Wireless Client to your Router

WPS Button

The easiest and most secure way to connect your wireless devices to the router is with WPS (Wi-Fi Protected Setup). Most wireless devices such as wireless adapters, media players, Blu-ray DVD players, wireless printers and cameras will have a WPS button (or a software utility with WPS) that you can press to connect to the DIR-885L router. Please refer to your user manual for the wireless device you want to connect to make sure you understand how to enable WPS. Once you know, follow the steps below:

**Step 1** - Press the WPS button on the DIR-885L for about 1 second. The LED on the front will start to blink.

![WPS Button](image)

**Step 2** - Within 2 minutes, press the WPS button on your wireless device (or launch the software utility and start the WPS process).

**Step 3** - Allow up to 1 minute for your connection to be configured. Once the Internet light stops blinking, you will be connected and your wireless connection will be secure with WPA2.
When connecting to the DIR-885L wirelessly for the first time, you will need to input the wireless network name (SSID) and Wi-Fi password (security key) of the device you are connecting to. If your product has a Wi-Fi configuration card, you can find the default network name and Wi-Fi password here. Otherwise refer to the product label for the default Wi-Fi network SSID and password, or enter the Wi-Fi credentials set during the product configuration.

To join an existing network, locate the wireless network icon in the taskbar, next to the time display, and click on it.

Clicking on this icon will display a list of wireless networks which are within range of your computer. Select the desired network by clicking on the SSID.
To connect to the SSID, click **Connect**.

To automatically connect to the router when your device detects the SSID, click the **Connect Automatically** check box.

You will then be prompted to enter the Wi-Fi password (network security key) for the wireless network. Enter the password into the box and click **Next** to connect to the network. Your computer will now automatically connect to this wireless network when it is detected.

You can also use Wi-Fi Protected Setup (WPS) to connect to the router. Press the WPS button on your D-Link device and you will be automatically connected.
Section 7 - Connecting a Wireless Client to your Router

Windows® 8
WPA/WPA2

It is recommended that you enable wireless security (WPA/WPA2) on your wireless router or access point before configuring your wireless adapter. If you are joining an existing network, you will need to know the security key (Wi-Fi password) being used.

To join an existing network, locate the wireless network icon in the taskbar next to the time display.

Clicking on this icon will display a list of wireless networks that are within connecting proximity of your computer. Select the desired network by clicking on the network name.
You will then be prompted to enter the network security key (Wi-Fi password) for the wireless network. Enter the password into the box and click **Next**.

If you wish to use Wi-Fi Protected Setup (WPS) to connect to the router, you can also press the WPS button on your router during this step to enable the WPS function.

When you have established a successful connection to a wireless network, the word **Connected** will appear next to the name of the network to which you are connected to.
It is recommended that you enable wireless security (WPA/WPA2) on your wireless router or access point before configuring your wireless adapter. If you are joining an existing network, you will need to know the security key or passphrase being used.

Click on the wireless icon in your system tray (lower-right corner).

The utility will display any available wireless networks in your area.
Highlight the wireless connection with Wi-Fi name (SSID) you would like to connect to and click the **Connect** button.

If you get a good signal but cannot access the Internet, check your TCP/IP settings for your wireless adapter. Refer to the Networking Basics section in this manual for more information.

The following window appears while your computer tries to connect to the router.
Section 7 - Connecting a Wireless Client to your Router

Enter the same security key or passphrase (Wi-Fi password) that is on your router and click Connect. You can also connect by pushing the WPS button on the router.

It may take 20-30 seconds to connect to the wireless network. If the connection fails, please verify that the security settings are correct. The key or passphrase must be exactly the same as the one on the wireless router.
Windows Vista®

Windows Vista® users may use the built-in wireless utility. If you are using another company’s wireless utility, please refer to the user manual of your wireless adapter for help connecting to a wireless network. Most wireless utilities will have a “site survey” option similar to the Windows Vista® utility as seen below.

If you receive the **Wireless Networks Detected** bubble, click on the center of the bubble to access the utility.

or

Right-click on the wireless computer icon in your system tray (lower-right corner next to the time). Select **Connect to a network**.

The utility will display any available wireless networks in your area. Click on a network (displayed using the SSID) and click the **Connect** button.

If you get a good signal but cannot access the Internet, check you TCP/IP settings for your wireless adapter. Refer to the **Networking Basics** section in this manual for more information.
WPA/WPA2

It is recommended that you enable wireless security (WPA/WPA2) on your wireless router or access point before configuring your wireless adapter. If you are joining an existing network, you will need to know the security key or passphrase being used.

Open the Windows Vista® Wireless Utility by right-clicking on the wireless computer icon in your system tray (lower right corner of screen). Select **Connect to a network**.

Highlight the Wi-Fi name (SSID) you would like to connect to and click **Connect**.
Enter the same security key or passphrase (Wi-Fi password) that is on your router and click Connect.

It may take 20-30 seconds to connect to the wireless network. If the connection fails, please verify that the security settings are correct. The key or passphrase must be exactly the same as the one on the wireless router.
Troubleshooting

This chapter provides solutions to problems that can occur during the installation and operation of the DIR-885L. Read the following descriptions if you are having problems. The examples below are illustrated in Windows® XP. If you have a different operating system, the screenshots on your computer will look similar to these examples.

Why can’t I access the web-based configuration utility?

When entering the IP address of the D-Link router (192.168.0.1 for example), you are not connecting to a website, nor do you have to be connected to the Internet. The device has the utility built-in to a ROM chip in the device itself. Your computer must be on the same IP subnet to connect to the web-based utility.

- Make sure you have an updated Java-enabled web browser. We recommend the following:
  - Microsoft Internet Explorer® 10 or higher
  - Mozilla Firefox 28 or higher
  - Google™ Chrome 28 or higher
  - Apple Safari 6 or higher

- Verify physical connectivity by checking for solid link lights on the device. If you do not get a solid link light, try using a different cable, or connect to a different port on the device if possible. If the computer is turned off, the link light may not be on.

- Disable any Internet security software running on the computer. Software firewalls such as ZoneAlarm, BlackICE, Sygate, Norton Personal Firewall, and Windows® XP firewall may block access to the configuration pages. Check the help files included with your firewall software for more information on disabling or configuring it.
Section 8 - Troubleshooting

• Configure your Internet settings:

• Go to Start > Settings > Control Panel. Double-click the Internet Options Icon. From the Security tab, click the button to restore the settings to their defaults.

• Click the Connection tab and set the dial-up option to Never Dial a Connection. Click the LAN Settings button. Make sure nothing is checked. Click OK.

• Go to the Advanced tab and click the button to restore these settings to their defaults. Click OK three times.

• Close your web browser (if open) and open it.

• Access the web management. Open your web browser and enter the IP address of your D-Link router in the address bar. This should open the login page for your web management.

• If you still cannot access the configuration, unplug the power to the router for 10 seconds and plug back in. Wait about 30 seconds and try accessing the configuration. If you have multiple computers, try connecting using a different computer.

What can I do if I forgot my password?

If you forgot your password, you must reset your router. This process will change all your settings back to the factory defaults.

To reset the router, locate the reset button (hole) on the rear panel of the unit. With the router powered on, use a paperclip to hold the button down for 10 seconds. Release the button and the router will go through its reboot process. Wait about 30 seconds to access the router. The default IP address is 192.168.0.1. When logging in, leave the password box empty.
Why can’t I connect to certain sites or send and receive emails when connecting through my router?

If you are having a problem sending or receiving email, or connecting to secure sites such as eBay, banking sites, and Hotmail, we suggest lowering the MTU in increments of ten (Ex. 1492, 1482, 1472, etc).

To find the proper MTU Size, you’ll have to do a special ping of the destination you’re trying to go to. A destination could be another computer, or a URL.

• Click on **Start** and then click **Run**.

• Windows® 95, 98, and Me users type in **command** (Windows® NT, 2000, XP, Vista®, and 7 users type in **cmd**) and press **Enter** (or click **OK**).

• Once the window opens, you’ll need to do a special ping. Use the following syntax:

  ping [url] [-f] [-l] [MTU value]

Example: **ping yahoo.com -f -l 1472**
You should start at 1472 and work your way down by 10 each time. Once you get a reply, go up by 2 until you get a fragmented packet. Take that value and add 28 to the value to account for the various TCP/IP headers. For example, let's say that 1452 was the proper value, the actual MTU size would be 1480, which is the optimum for the network we're working with (1452+28=1480).

Once you find your MTU, you can now configure your router with the proper MTU size.

To change the MTU rate on your router follow the steps below:

- Open your browser, enter the IP address of your router (192.168.0.1) and click **OK**.
- Enter your username (admin) and password (sometimes blank by default). Click **OK** to enter the web configuration page for the device.
- Click on **Setup** and then click **Manual Configure**.
- To change the MTU, enter the number in the MTU field and click **Save Settings** to save your settings.
- Test your email. If changing the MTU does not resolve the problem, continue changing the MTU in increments of ten.
D-Link wireless products are based on industry standards to provide easy-to-use and compatible high-speed wireless connectivity within your home, business, or on public access wireless networks. Strictly adhering to the IEEE standard, the D-Link wireless family of products will allow you to securely access the data you want, when, and where you want it. You will be able to enjoy the freedom that wireless networking delivers.

A wireless local area network (WLAN) is a cellular computer network that transmits and receives data with radio signals instead of wires. Wireless LANs are used increasingly in both home and office environments, and public areas such as airports, coffee shops and universities. Innovative ways to utilize WLAN technology are helping people work, and communicate more efficiently. Increased mobility and the absence of cabling and other fixed infrastructure have proven to be beneficial for many users.

Wireless users can use the same applications they use on a wired network. Wireless adapter cards used on laptop and desktop systems support the same protocols as Ethernet adapter cards.

Under many circumstances, it may be desirable for mobile network devices to link to a conventional Ethernet LAN in order to use servers, printers or an Internet connection supplied through the wired LAN. A wireless router is a device used to provide this link.
What is Wireless?

Wireless or Wi-Fi technology is another way of connecting your computer to the network without using wires. Wi-Fi uses radio frequency to connect wirelessly so you have the freedom to connect computers anywhere in your home or office network.

Why D-Link Wireless?

D-Link is the worldwide leader and award winning designer, developer, and manufacturer of networking products. D-Link delivers the performance you need at a price you can afford. D-Link has all the products you need to build your network.

How does wireless work?

Wireless works similarly to how cordless phones work, through radio signals that transmit data from one point A to point B. But wireless technology has restrictions as to how you can access the network. You must be within the wireless network range area to be able to connect your computer. There are two different types of wireless networks: Wireless Local Area Network (WLAN), and Wireless Personal Area Network (WPAN).

Wireless Local Area Network (WLAN)

In a wireless local area network, a device called an Access Point (AP) connects computers to the network. The access point has a small antenna attached to it, which allows it to transmit data back and forth over radio signals. With an indoor access point the signal can travel up to 300 feet. With an outdoor access point the signal can reach out up to 30 miles to serve places like manufacturing plants, industrial locations, university and high school campuses, airports, golf courses, and many other outdoor venues.

Wireless Personal Area Network (WPAN)

Bluetooth is the industry standard wireless technology used for WPAN. Bluetooth devices in WPAN operate in a range up to 30 feet away.

Compared to WLAN the speed and wireless operation range are both less than WLAN, but in return it doesn’t use nearly as much power. This makes
it ideal for personal devices, such as mobile phones, PDAs, headphones, laptops, speakers, and other devices that operate on batteries.

**Who uses wireless?**

Wireless technology has become so popular in recent years that almost everyone is using it, whether it’s for home, office, business, D-Link has a wireless solution for it.

**Home Uses/Benefits**
- Gives everyone at home broadband access
- Surf the web, check email, instant message, etc.
- Gets rid of the cables around the house
- Simple and easy to use

**Small Office and Home Office Uses/Benefits**
- Stay on top of everything at home as you would at office
- Remotely access your office network from home
- Share Internet connection and printer with multiple computers
- No need to dedicate office space
Where is wireless used?

Wireless technology is expanding everywhere, not just at home or office. People like the freedom of mobility and it’s becoming so popular that more and more public facilities now provide wireless access to attract people. The wireless connection in public places is usually called “hotspots”.

Using a D-Link USB adapter with your laptop, you can access the hotspot to connect to the Internet from remote locations like: airports, hotels, coffee shops, libraries, restaurants, and convention centers.

Wireless network is easy to setup, but if you’re installing it for the first time it could be quite a task not knowing where to start. That’s why we’ve put together a few setup steps and tips to help you through the process of setting up a wireless network.

Tips

Here are a few things to keep in mind, when you install a wireless network.

Centralize your router or access point

Make sure you place the router/access point in a centralized location within your network for the best performance. Try to place the router/access point as high as possible in the room, so the signal gets dispersed throughout your home. If you have a two-story home, you may need a repeater to boost the signal to extend the range.

Eliminate Interference

Place home appliances such as cordless telephones, microwaves, and televisions as far away as possible from the router/access point. This would significantly reduce any interference that the appliances might cause since they operate on same frequency.

Security

Don’t let your next-door neighbors or intruders connect to your wireless network. Secure your wireless network by turning on the WPA or WEP security feature on the router. Refer to the product manual for detail information on how to set it up.
Wireless Modes

There are basically two modes of networking:

- **Infrastructure** – All wireless clients will connect to an access point or wireless router.

- **Ad-hoc** – Directly connecting to another computer for peer-to-peer communication using wireless network adapters on each computer, such as two or more DIR-885L wireless network USB adapters.

An Infrastructure network contains an access point or wireless router. All the wireless devices, or clients, will connect to the wireless router or access point.

An Ad-hoc network contains only clients, such as laptops with wireless USB adapters. All the adapters must be in Ad-hoc mode to communicate.
Networking Basics

Check your IP address

After you install your new D-Link adapter, by default, the TCP/IP settings should be set to obtain an IP address from a DHCP server (i.e. wireless router) automatically. To verify your IP address, please follow the steps below.

Click on Start > Run. In the run box type cmd and click OK. (Windows® 7/Vista® users type cmd in the Start Search box.)

At the prompt, type ipconfig and press Enter.

This will display the IP address, subnet mask, and the default gateway of your adapter.

If the address is 0.0.0.0, check your adapter installation, security settings, and the settings on your router. Some firewall software programs may block a DHCP request on newly installed adapters.
Appendix B - Networking Basics

Statically Assign an IP address

If you are not using a DHCP capable gateway/router, or you need to assign a static IP address, please follow the steps below:

**Step 1**
Windows® 7 - Click on **Start > Control Panel > Network and Internet > Network and Sharing Center**.
Windows Vista® - Click on **Start > Control Panel > Network and Internet > Network and Sharing Center > Manage Network Connections**.
Windows® XP - Click on **Start > Control Panel > Network and Internet > Network Connections**.
Windows® 2000 - From the desktop, right-click **My Network Places > Properties**.

**Step 2**
Right-click on the **Local Area Connection** which represents your network adapter and select **Properties**.

**Step 3**
Highlight **Internet Protocol (TCP/IP)** and click **Properties**.

**Step 4**
Click **Use the following IP address** and enter an IP address that is on the same subnet as your network or the LAN IP address on your router.

Example: If the router’s LAN IP address is 192.168.0.1, make your IP address 192.168.0.X where X is a number between 2 and 99. Make sure that the number you choose is not in use on the network. Set the Default Gateway the same as the LAN IP address of your router (I.E. 192.168.0.1).

Set Primary DNS the same as the LAN IP address of your router (192.168.0.1). The Secondary DNS is not needed or you may enter a DNS server from your ISP.

**Step 5**
Click **OK** twice to save your settings.
Wireless Security

This section will show you the different levels of security you can use to protect your data from intruders. The DIR-885L offers the following types of security:

- WPA2 (Wi-Fi Protected Access 2)
- WPA (Wi-Fi Protected Access)
- WPA2-PSK (Pre-Shared Key)
- WPA-PSK (Pre-Shared Key)

What is WPA?

WPA (Wi-Fi Protected Access), is a Wi-Fi standard that was designed to improve the security features of WEP (Wired Equivalent Privacy).

The 2 major improvements over WEP:

- Improved data encryption through the Temporal Key Integrity Protocol (TKIP). TKIP scrambles the keys using a hashing algorithm and by adding an integrity-checking feature, ensures that the keys haven’t been tampered with. WPA2 is based on 802.11i and uses Advanced Encryption Standard (AES) instead of TKIP.

- User authentication, which is generally missing in WEP, through the extensible authentication protocol (EAP). WEP regulates access to a wireless network based on a computer’s hardware-specific MAC address, which is relatively simple to be sniffed out and stolen. EAP is built on a more secure public-key encryption system to ensure that only authorized network users can access the network.

WPA-PSK/WPA2-PSK uses a passphrase or key to authenticate your wireless connection. The key is an alpha-numeric password between 8 and 63 characters long. The password can include symbols (!?*&_) and spaces. This key must be the exact same key entered on your wireless router or access point.

WPA/WPA2 incorporates user authentication through the Extensible Authentication Protocol (EAP). EAP is built on a more secure public key encryption system to ensure that only authorized network users can access the network.
Technical Specifications

Device Interfaces
- 802.11 ac/n/g/b/a wireless LAN
- Four 10/100/1000 Gigabit LAN ports
- 10/100/1000 Gigabit WAN port
- USB 3.0 port

Antenna Types
- Four external antennas

Standards
- IEEE 802.11ac
- IEEE 802.11n
- IEEE 802.11g
- IEEE 802.11b
- IEEE 802.11a
- IEEE 802.3
- IEEE 802.3u

Security
- WPA™ - Personal/Enterprise
- WPA2™ - Personal/Enterprise
- Wi-Fi Protected Setup (WPS) PIN/PBC

Power
- Input: 100 to 240 V AC, 50/60 Hz
- Output: 12 V DC, 3 A

USB Port Power
- 5 V / 0.9 A

Operating Temperature
- 0 to 40 °C (32 to 104 °F)

Operating Humidity
- 10% to 95% maximum (non-condensing)

Certifications
- FCC Class B
- CSA/LVD
- CE Class B
- C-Tick
- IPv6 Ready
- Wi-Fi Protected Setup (WPS)
- Wi-Fi Multimedia (WMM)
- Compatible with Windows 8

Dimensions
- L = 289.29 mm (11.39 inches)
- W = 191.05 mm (7.52 inches)
- H = 74.47 mm (2.93 inches)

1 Maximum wireless signal rate derived from IEEE Standard 802.11a, 802.11g, 802.11n, and 802.11ac specifications. Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead, lower actual data throughput rate. Environmental factors will adversely affect wireless signal range.
2 Frequency Range varies depending on country’s regulation.
3 The DIR-885L does not include 5.25-5.35 GHz & 5.47-5.725 GHz in some regions.
Regulatory Information

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Non-modifications Statement:

Any changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate this equipment.

Caution:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This device and its antenna(s) must not be co-located or operating in conjunction with any other antenna or transmitter except in accordance with FCC multi-transmitter product procedures. For product available in the USA/Canada market, only channel 1~11 can be operated. Selection of other channels is not possible.

Note

The country code selection is for non-USA models only and is not available to all USA models. Per FCC regulations, all WiFi product marketed in the USA must be fixed to USA operational channels only.
RF Frequency Requirements
This device is for indoor use only when using all channels in the 5.150 - 5.250 GHz, 5.725 - 5.850 GHz frequency range. High power radars are
allocated as primary users of the 5.150 - 5.250 GHz, 5.725 - 5.850 GHz bands. These radar stations can cause interference with and/or damage this
device.

It is restricted to indoor environments only.

IMPORTANT NOTICE:

FCC Radiation Exposure Statement
This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and
operated with minimum distance 26 cm between the radiator and your body.
Innovation, Science and Economic Development Canada (ISED) Statement:
This Class B digital apparatus complies with Canadian ICES-003.
Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

Innovation, Science and Economic Development Canada (ISED) Statement:
This device complies with ISED licence-exempt RSS standard(s). Operation is subject to the following two conditions:
(1) this device may not cause interference, and
(2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'ISED applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes :
(1) l'appareil ne doit pas produire de brouillage, et
(2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

(i) the device for operation in the band 5150-5250 MHz is only for indoor use to reduce the potential for harmful interference to co-channel mobile satellite systems;

(i) les dispositifs fonctionnant dans la bande 5150-5250 MHz sont réservés uniquement pour une utilisation à l'intérieur afin de réduire les risques de brouillage préjudiciable aux systèmes de satellites mobiles utilisant les mêmes canaux;

(iii) for devices with detachable antenna(s), the maximum antenna gain permitted for devices in the band 5725-5850 MHz shall be such that the equipment still complies with the e.i.r.p. limits specified for point-to-point and non-point-to-point operation as appropriate;

(iii) pour les dispositifs munis d'antennes amovibles, le gain maximal d'antenne permis (pour les dispositifs utilisant la bande de 5725 à 5850 MHz) doit être conforme à la limite de la p.i.r.e. spécifiée pour l'exploitation point à point et l'exploitation non point à point, selon le cas;
Radiation Exposure Statement
This equipment complies with ISED radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 31 cm between the radiator and your body.

Déclaration d'exposition aux radiations
Cet équipement est conforme aux limites d'exposition aux rayonnements ISED établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec un minimum de 31 cm de distance entre la source de rayonnement et votre corps.

Warning
This unit is to be used with a power supply, model WA-36A12R.

Avertissement
Cet appareil doit etre utilise avec une source de courrant, modele WA-36A12R.

NCC 警語：

以下警語適用台灣地區

依據 低功率電波輻射性電機管理辦法

第十二條: 經型式認證合格之低功率射頻電機，非經許可，公司、商號或使用者均不得擅自變更頻率、加大功率或變更原設計之特性及功能。

第十四條: 低功率射頻電機之使用不得影響飛航安全及干擾合法通信；經發現有干擾現象時，應立即停用，並改善至無干擾時方得繼續使用。前項合法通信，指依電信法規定作業之無線電通信。低功率射頻電機須忍受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。

無線傳輸設備 (UNII)

在 5.25-5.35 稈赫頻帶內操作之無線資訊傳輸設備，限於室內使用。無線資訊傳輸設備忍受合法通信之干擾且不得干擾合法通信；如造成干擾，應立即停用，俟無干擾之虞，始得繼續使用。無線資訊傳設備的製造廠商應確保频率穩定性，如依製造廠商使用手冊上所述正常操作，發射的信號應維持於操作頻帶中。

電磁波曝露量MPE標準值1 mW/cm²，本產品使用時建議應距離人體: 28 cm.

### Warning Statement:
The power outlet should be near the device and easily accessible.
NOTICE OF WIRELESS RADIO LAN USAGE IN THE EUROPEAN COMMUNITY (FOR WIRELESS PRODUCT ONLY):

- This device is restricted to indoor use when operated in the European Community using channels in the 5.15-5.35 GHz band to reduce the potential for interference.
- This device is a 2.4 GHz wideband transmission system (transceiver), intended for use in all EU member states and EFTA countries. This equipment may be operated in AL, AD, BE, BG, DK, DE, FI, FR, GR, GW, IS, IT, HR, LI, LU, MT, MK, MD, MC, NL, NO, AT, PL, PT, RO, SM, SE, RS, SK, ES, CI, HU, and CY.

Usage Notes:

- To remain in conformance with European National spectrum usage regulations, frequency and channel limitations will be applied on the products according to the country where the equipment will be deployed.
- This device is restricted from functioning in Ad-hoc mode while operating in 5 GHz. Ad-hoc mode is direct peer-to-peer communication between two client devices without an Access Point.
- Access points will support DFS (Dynamic Frequency Selection) and TPC (Transmit Power Control) functionality as required when operating in 5 GHz band within the EU.
- Please refer to the product manual or datasheet to check whether your product uses 2.4 GHz and/or 5 GHz wireless.

HINWEIS ZUR VERWENDUNG VON DRAHTLOS-NETZWERK (WLAN) IN DER EUROPÄISCHEN GEMEINSCHAFT (NUR FÜR EIN DRAHTLOSES PRODUKT)

- Der Betrieb dieses Geräts in der Europäischen Gemeinschaft bei Nutzung von Kanälen im 5,15-5,35 GHz Frequenzband ist ausschließlich auf Innenräume beschränkt, um das Interferenzpotential zu reduzieren.
- Bei diesem Gerät handelt es sich um ein zum Einsatz in allen EU-Mitgliedsstaaten und in EFTA-Ländern - ausgenommen Frankreich. Der Betrieb dieses Geräts ist in den folgenden Ländern erlaubt: AL, AD, BE, BG, DK, DE, FI, FR, GR, GW, IS, IT, HR, LI, LU, MT, MK, MD, MC, NL, NO, AT, PL, PT, RO, SM, SE, RS, SK, ES, CI, HU, CY

Gebrauchshinweise:

- Um den in Europa geltenden nationalen Vorschriften zum Nutzen des Funkspektrums weiterhin zu entsprechen, werden Frequenz und Kanalbeschränkungen, dem jeweiligen Land, in dem das Gerät zum Einsatz kommt, entsprechend, auf die Produkte angewandt.
- Access Points unterstützen die Funktionen DFS (Dynamic Frequency Selection) und TPC (Transmit Power Control) wie erforderlich bei Betrieb auf 5 GHz innerhalb der EU.
- Bitte schlagen Sie im Handbuch oder Datenblatt nach nach, ob Ihr Gerät eine 2,4 GHz und/oder 5 GHz Verbindung nutzt.
AVIS CONCERNANT L'UTILISATION DE LA RADIO SANS FIL LAN DANS LA COMMUNAUTÉ EUROPÉENNE (UNIQUEMENT POUR LES PRODUITS SANS FIL)

• Cet appareil est limité à un usage intérieur lorsqu’il est utilisé dans la Communauté européenne sur les canaux de la bande de 5,15 à 5,35 GHz afin de réduire les risques d’interférences.
• Cet appareil est un système de transmission à large bande (émetteur-récepteur) de 2,4 GHz, destiné à être utilisé dans tous les États-membres de l'UE et les pays de l'AELE. Cet équipement peut être utilisé dans les pays suivants : AL, AD, BE, BG, DK, DE, FI, FR, GR, GW, IS, IT, HR, LI, LU, MT, MK, MD, MC, NL, NO, AT, PL, PT, RO, SM, SE, RS, SK, ES, CI, HU, CY

Notes d'utilisation:
• Pour rester en conformité avec la réglementation nationale européenne en matière d'utilisation du spectre, des limites de fréquence et de canal seront appliquées aux produits selon le pays où l’équipement sera déployé.
• Cet appareil ne peut pas utiliser le mode Ad-hoc lorsqu’il fonctionne dans la bande de 5 GHz. Le mode Adhoc fournit une communication directe pair à pair entre deux périphériques clients sans point d'accès.
• Les points d'accès prendront en charge les fonctionnalités DFS (Dynamic Frequency Selection) et TPC (Transmit Power Control) au besoin lors du fonctionnement dans la bande de 5 GHz au sein de l'UE.
• Merci de vous référer au guide d'utilisation ou de la fiche technique afin de vérifier si votre produit utilise 2.4 GHz et/ou 5 GHz sans fil.

AVISO DE USO DE LA LAN DE RADIO INALÁMBRICA EN LA COMUNIDAD EUROPEA (SOLO PARA EL PRODUCTO INALÁMBRICO)

• El uso de este dispositivo está restringido a interiores cuando funciona en la Comunidad Europea utilizando canales en la banda de 5,15-5,35 GHz, para reducir la posibilidad de interferencias.
• Este dispositivo es un sistema de transmisión (transceptor) de banda ancha de 2,4 GHz, pensado para su uso en todos los estados miembros de la UE y en los países de la AELE. Este equipo se puede utilizar en AL, AD, BE, BG, DK, DE, FI, FR, GR, GW, IS, IT, HR, LI, LU, MT, MK, MD, MC, NL, NO, AT, PL, PT, RO, SM, SE, RS, SK, ES, CI, HU, CY

Notas de uso:
• Para seguir cumpliendo las normas europeas de uso del espectro nacional, se aplicarán limitaciones de frecuencia y canal en los productos en función del país en el que se pondrá en funcionamiento el equipo.
• Este dispositivo tiene restringido el funcionamiento en modo Ad-hoc mientras funcione a 5 Ghz. El modo Ad-hoc es la comunicación directa de igual a igual entre dos dispositivos cliente sin un punto de acceso.
• Los puntos de acceso admitirán la funcionalidad DFS (Selección de frecuencia dinámica) y TPC (Control de la potencia de transmisión) si es necesario cuando funcionan a 5 Ghz dentro de la UE.
• Por favor compruebe el manual o la ficha de producto para comprobar si el producto utiliza las bandas inalámbricas de 2.4 GHz y/o la de 5 GHz.
AVVISO PER L’USO DI LAN RADIO WIRELESS NELLA COMUNITÀ EUROPEA (SOLO PER PRODOTTI WIRELESS)

- Nella Comunità europea, l’uso di questo dispositivo è limitato esclusivamente agli ambienti interni sui canali compresi nella banda da 5,15 a 5,35 GHz al fine di ridurre potenziali interferenze. Questo dispositivo è un sistema di trasmissione a banda larga a 2,4 GHz (ricetrasmissente), destinato all’uso in tutti gli stati membri dell’Unione europea e nei paesi EFTA.
- Questo dispositivo può essere utilizzato in AL, AD, BE, BG, DK, DE, FI, FR, GR, GW, IS, IT, HR, LI, LU, MT, MK, MD, MC, NL, NO, AT, PL, PT, RO, SM, SE, RS, SK, ES, CI, HU, CY

Note per l’uso
- Al fine di mantenere la conformità alle normative nazionali europee per l’uso dello spettro di frequenze, saranno applicate limitazioni sulle frequenze e sui canali per il prodotto in conformità alle normative del paese in cui il dispositivo viene utilizzato.
- Questo dispositivo non può essere attivato in modalità Ad-hoc durante il funzionamento a 5 Ghz. La modalità Ad-hoc è una comunicazione diretta peer-to-peer fra due dispositivi client senza un punto di accesso.
- I punti di accesso supportano le funzionalità DFS (Dynamic Frequency Selection) e TPC (Transmit Power Control) richieste per operare a 5 Ghz nell’Unione europea.
- Ti invitiamo a fare riferimento al manuale del prodotto o alla scheda tecnica per verificare se il tuo prodotto utilizza le frequenze 2,4 GHz e/o 5 GHz.

KENNISGEVING VAN DRAADLOOS RADIO LAN-GEbruik IN DE EUROPESE GEMEENSCHAP (ALLEEN VOOR DRAADLOOS PRODUCT)

- Dit toestel is beperkt tot gebruik binnenshuis wanneer het wordt gebruikt in de Europese Gemeenschap gebruik makend van kanalen in de 5.15-5.35 GHz band om de kans op interferentie te beperken.
- Dit toestel is een 2.4 GHz breedband transmissiesysteem (transceiver) dat bedoeld is voor gebruik in alle EU lidstaten en EFTA landen. Deze uitrusting mag gebruikt worden in AL, AD, BE, BG, DK, DE, FI, FR, GR, GW, IS, IT, HR, LI, LU, MT, MK, MD, MC, NL, NO, AT, PL, PT, RO, SM, SE, RS, SK, ES, CI, HU, CY

Gebruiksaanwijzingen:
- Om de gebruiksvoorschriften van het Europese Nationale spectrum na te leven, zullen frequentie- en kanaalbeperkingen worden toegepast op de producten volgens het land waar de uitrusting gebruikt zal worden.
- Dit toestel kan niet functioneren in Ad-hoc mode wanneer het gebruikt wordt in 5 GHz. Ad-hoc mode is directe peer-to-peer communicatie tussen twee klantenapparaten zonder een toegangspunt.
- Toegangspunten ondersteunen DFS (Dynamic Frequency Selection) en TPC (Transmit Power Control) functionaliteit zoals vereist bij gebruik in 5 GHz binnen de EU.
- Raadpleeg de handleiding of de datasheet om te controleren of uw product gebruik maakt van 2,4 GHz en/of 5 GHz.
SAFETY INSTRUCTIONS
The following general safety guidelines are provided to help ensure your own personal safety and protect your product from potential damage. Remember to consult the product user instructions for more details.

• Static electricity can be harmful to electronic components. Discharge static electricity from your body (i.e. touching grounded bare metal) before touching the product.
• Do not attempt to service the product and never disassemble the product. For some products with a user replaceable battery, please read and follow the instructions in the user manual.
• Do not spill food or liquid on your product and never push any objects into the openings of your product.
• Do not use this product near water, areas with high humidity, or condensation unless the product is specifically rated for outdoor application.
• Keep the product away from radiators and other heat sources.
• Always unplug the product from mains power before cleaning and use a dry lint free cloth only.

SICHERHEITSVORSCHRIFTEN
Die folgenden allgemeinen Sicherheitsvorschriften dienen als Hilfe zur Gewährleistung Ihrer eigenen Sicherheit und zum Schutz Ihres Produkts. Weitere Details finden Sie in den Benutzeranleitungen zum Produkt.

• Statische Elektrizität kann elektronischen Komponenten schaden. Um Schäden durch statische Aufladung zu vermeiden, leiten Sie elektrostatische Ladungen von Ihrem Körper ab, (z. B. durch Berühren eines geerdeten blanken Metallteils), bevor Sie das Produkt berühren.
• Unterlassen Sie jeden Versuch, das Produkt zu warten, und versuchen Sie nicht, es in seine Bestandteile zu zerlegen. Für einige Produkte mit austauschbaren Akkus lesen Sie bitte das Benutzerhandbuch und befolgen Sie die dort beschriebenen Anleitungen.
• Vermeiden Sie, dass Speisen oder Flüssigkeiten auf Ihr Produkt gelangen, und stecken Sie keine Gegenstände in die Gehäuseschlitze oder -öffnungen Ihres Produkts.
• Verwenden Sie dieses Produkt nicht in unmittelbarer Nähe von Wasser und nicht in Bereichen mit hoher Luftfeuchtigkeit oder Kondensation, es sei denn, es ist speziell zur Nutzung in Außenbereichen vorgesehen und eingestuft.
• Halten Sie das Produkt von Heizkörpern und anderen Quellen fern, die Wärme erzeugen.
• Trennen Sie das Produkt immer von der Stromzufuhr, bevor Sie es reinigen und verwenden Sie dazu ausschließlich ein trockenes fusselsfreies Tuch.
CONSIGNES DE SÉCURITÉ
Les consignes générales de sécurité ci-après sont fournies afin d’assurer votre sécurité personnelle et de protéger le produit d’éventuels dommages. Veuillez consulter les consignes d’utilisation du produit pour plus de détails.
• L’électricité statique peut endommager les composants électroniques. Déchargez l’électricité statique de votre corps (en touchant un objet en métal relié à la terre par exemple) avant de toucher le produit.
• N’essayez pas d’intervenir sur le produit et ne le démontez jamais. Pour certains produits contenant une batterie remplaçable par l’utilisateur, veuillez lire et suivre les consignes contenues dans le manuel d’utilisation.
• Ne renversez pas d’aliments ou de liquide sur le produit et n’insérez jamais d’objets dans les orifices.
• N’utilisez pas ce produit à proximité d’un point d’eau, de zones très humides ou de condensation sauf si le produit a été spécifiquement conçu pour une application extérieure.
• Éloignez le produit des radiateurs et autres sources de chaleur.
• Débranchez toujours le produit de l’alimentation avant de le nettoyer et utilisez uniquement un chiffon sec non pelucheux.

INSTRUCCIONES DE SEGURIDAD
Las siguientes directrices de seguridad general se facilitan para ayudarle a garantizar su propia seguridad personal y para proteger el producto frente a posibles daños. No olvide consultar las instrucciones del usuario del producto para obtener más información.
• La electricidad estática puede resultar nociva para los componentes electrónicos. Descargue la electricidad estática de su cuerpo (p. ej., tocando algún metal sin revestimiento conectado a tierra) antes de tocar el producto.
• No intente realizar el mantenimiento del producto ni lo desmonte nunca. Para algunos productos con batería reemplazable por el usuario, lea y siga las instrucciones del manual de usuario.
• No derrame comida o líquidos sobre el producto y nunca deje que caigan objetos en las aberturas del mismo.
• No utilice este producto cerca del agua, en zonas con humedad o condensación elevadas a menos que el producto esté clasificado específicamente para aplicación en exteriores.
• Mantenga el producto alejado de los radiadores y de otras fuentes de calor.
• Desenchufe siempre el producto de la alimentación de red antes de limpiarlo y utilice solo un paño seco sin pelusa.
ISTRUZIONI PER LA SICUREZZA

Le seguenti linee guida sulla sicurezza sono fornite per contribuire a garantire la sicurezza personale degli utenti e a proteggere il prodotto da potenziali danni. Per maggiori dettagli, consultare le istruzioni per l’utente del prodotto.

- L'elettricità statica può essere pericolosa per i componenti elettronici. Scaricare l'elettricità statica dal corpo (ad esempio toccando una parte metallica collegata a terra) prima di toccare il prodotto.
- Non cercare di riparare il prodotto e non smontarlo mai. Per alcuni prodotti dotati di batteria sostituibile dall’utente, leggere e seguire le istruzioni riportate nel manuale dell’utente.
- Non versare cibi o liquidi sul prodotto e non spingere mai alcun oggetto nelle aperture del prodotto.
- Non usare questo prodotto vicino all’acqua, in aree con elevato grado di umidità o soggette a condensa a meno che il prodotto non sia specificatamente approvato per uso in ambienti esterni.
- Tenere il prodotto lontano da caloriferi e altre fonti di calore.
- Scollegare sempre il prodotto dalla presa elettrica prima di pulirlo e usare solo un panno asciutto che non lasci filacce.

VEILIGHEIDSINFORMATIE

De volgende algemene veiligheidsinformatie werd verstrekt om uw eigen persoonlijke veiligheid te waarborgen en uw product te beschermen tegen mogelijke schade. Denk eraan om de gebruikersinstructies van het product te raadplegen voor meer informatie.

- Statische elektriciteit kan schadelijk zijn voor elektronische componenten. Ontlaad de statische elektriciteit van uw lichaam (d.w.z. het aanraken van geaard bloot metaal) voordat u het product aanraakt.
- U mag nooit proberen het product te onderhouden en u mag het product nooit demonteren. Voor sommige producten met door de gebruiker te vervangen batterij, dient u de instructies in de gebruikershandleiding te lezen en te volgen.
- Mors geen voedsel of vloeistof op uw product en u mag nooit voorwerpen in de openingen van uw product duwen.
- Gebruik dit product niet in de buurt van water, gebieden met hoge vochtigheid of condensatie, tenzij het product specifiek geclassificeerd is voor gebruik buitenshuis.
- Houd het product uit de buurt van radiators en andere warmtebronnen.
- U dient het product steeds los te koppelen van de stroom voordat u het reinigt en gebruik uitsluitend een droge plusvrije doek.
Disposing of and Recycling Your Product

ENGLISH

This symbol on the product or packaging means that according to local laws and regulations this product should be not be disposed of in household waste but sent for recycling. Please take it to a collection point designated by your local authorities once it has reached the end of its life, some will accept products for free. By recycling the product and its packaging in this manner you help to conserve the environment and protect human health.

D-Link and the Environment

At D-Link, we understand and are committed to reducing any impact our operations and products may have on the environment. To minimise this impact D-Link designs and builds its products to be as environmentally friendly as possible, by using recyclable, low toxic materials in both products and packaging.

D-Link recommends that you always switch off or unplug your D-Link products when they are not in use. By doing so you will help to save energy and reduce CO2 emissions.

To learn more about our environmentally responsible products and packaging please visit www.dlinkgreen.com.

DEUTSCH

D-Link und die Umwelt

Wenn Sie mehr über unsere umweltgerechten Produkte und Verpackungen wissen möchten, finden Sie entsprechende Informationen im Internet unter www.dlinkgreen.com.
Ce symbole apposé sur le produit ou son emballage signifie que, conformément aux lois et règlementations locales, ce produit ne doit pas être éliminé avec les déchets domestiques mais recyclé. Veuillez le rapporter à un point de collecte prévu à cet effet par les autorités locales; certains accepteront vos produits gratuitement. En recyclant le produit et son emballage de cette manière, vous aidez à préserver l’environnement et à protéger la santé de l’homme.

D-Link et l’environnement
Chez D-Link, nous sommes conscients de l’impact de nos opérations et produits sur l’environnement et nous engageons à le réduire. Pour limiter cet impact, D-Link conçoit et fabrique ses produits de manière aussi écologique que possible, en utilisant des matériaux recyclables et faiblement toxiques, tant dans ses produits que ses emballages.

D-Link recommande de toujours éteindre ou débrancher vos produits D-Link lorsque vous ne les utilisez pas. Vous réaliserez ainsi des économies d’énergie et réduirez vos émissions de CO2.

ESPAÑOL
Este símbolo en el producto o el embalaje significa que, de acuerdo con la legislación y la normativa local, este producto no se debe desechar en la basura doméstica sino que se debe reciclar. Llévelo a un punto de recogida designado por las autoridades locales una vez que ha llegado al fin de su vida útil; algunos de ellos aceptan recogerlos de forma gratuita. Al reciclar el producto y su embalaje de esta forma, contribuye a preservar el medio ambiente y a proteger la salud de los seres humanos.

D-Link y el medio ambiente
En D-Link, comprendemos y estamos comprometidos con la reducción del impacto que puedan tener nuestras actividades y nuestros productos en el medio ambiente. Para reducir este impacto, D-Link diseña y fabrica sus productos para que sean lo más ecológicos posible, utilizando materiales reciclables y de baja toxicidad tanto en los productos como en el embalaje.

D-Link recomienda apagar o desenchufar los productos D-Link cuando no se estén utilizando. Al hacerlo, contribuirá a ahorrar energía y a reducir las emisiones de CO2.

Para obtener más información acerca de nuestros productos y embalajes ecológicos, visite el sitio www.dlinkgreen.com.
La presenza di questo simbolo sul prodotto o sulla confezione del prodotto indica che, in conformità alle leggi e alle normative locali, questo prodotto non deve essere smaltito nei rifiuti domestici, ma avviato al riciclo. Una volta terminato il ciclo di vita utile, portare il prodotto presso un punto di raccolta indicato dalle autorità locali. Alcuni questi punti di raccolta accettano gratuitamente i prodotti da riciclare. Scegliendo di riciclare il prodotto e il relativo imballaggio, si contribuirà a preservare l'ambiente e a salvaguardare la salute umana.

D-Link e l'ambiente

D-Link cerca da sempre di ridurre l'impatto ambientale dei propri stabilimenti e dei propri prodotti. Allo scopo di ridurre al minimo tale impatto, D-Link progetta e realizza i propri prodotti in modo che rispettino il più possibile l'ambiente, utilizzando materiali riciclabili a basso tasso di tossicità sia per i prodotti che per gli imballaggi.

D-Link raccomanda di spegnere sempre i prodotti D-Link o di scollegarne la spina quando non vengono utilizzati. In questo modo si contribuirà a risparmiare energia e a ridurre le emissioni di anidride carbonica.

Per ulteriori informazioni sui prodotti e sugli imballaggi D-Link a ridotto impatto ambientale, visitate il sito all'indirizzo www.dlinkgreen.com.

D-Link en het milieu

Bij D-Link spannen we ons in om de impact van onze handelingen en producten op het milieu te beperken. Om deze impact te beperken, ontwerpt en bouwt D-Link zijn producten zo milieuvriendelijk mogelijk, door het gebruik van recycleerbare producten met lage toxiciteit in product en verpakking.

D-Link raadt aan om steeds uw D-Link producten uit te schakelen of uit de stekker te halen wanneer u ze niet gebruikt. Door dit te doen bespaart u energie en beperkt u de CO2- emissies.

Breng een bezoek aan www.dlinkgreen.com voor meer informatie over onze milieuverantwoorde producten en verpakkingen.
Ten symbol umieszczony na produkcie lub opakowaniu oznacza, że zgodnie z miejscowym prawem i lokalnymi przepisami niniejszego produktu nie wolno wyrzucać jak odpady czy śmieci z gospodarstwa domowego, lecz należy go poddać procesowi recyklingu. Po zakończeniu użytkowania produktu, niektóre odpowiednio do tego celu podmioty przyjmą takie produkty nieodpłatnie, dlatego prosimy dostarczyć go do punktu zbiórki wskazanego przez lokalne władze. Poprzez proces recyklingu i dzięki takiemu postępowaniu z produktem oraz jego opakowaniem, pomogą Państwo chronić środowisko naturalne i dbać o ludzkie zdrowie.

D-Link i środowisko

D-Link podchodzimy w sposób świadomy do ochrony otoczenia oraz jesteśmy zaangażowani w zmniejszanie wpływu naszych działań i produktów na środowisko naturalne. W celu zminimalizowania takiego wpływu firma D-Link konstruuje i wytwarza swoje produkty w taki sposób, aby były one jak najbardziej przyjazne środowisku, stosując do tych celów materiały nadające się do powtórnegowego wykorzystania, charakteryzujące się małą toksycznością zarówno w przypadku samych produktów jak i opakowań.

Firma D-Link zaleca, aby Państwo zawsze prawidłowo wyłączali z użytku swoje produkty D-Link, gdy nie są one wykorzystywane. Postępując w ten sposób pozwalają Państwo oszczędzać energię i zmniejszać emisje CO2.

Aby dowiedzieć się więcej na temat produktów i opakowań mających wpływ na środowisko prosimy zapoznać się ze stroną Internetową www.dlinkgreen.com.
A D-Link és a környezet

A D-Linknél megértjük és elkötelezettek vagyunk a műveleteink és termékeink környezetre gyakorolt hatásainak csökkentésére. Az ezen hatás csökkentése érdekében a D-Link a lehető leginkább környezetbarát termékeket tervez és gyárt azáltal, hogy újrahasznosítható, alacsony károsanyag-tartalmú termékeket gyárt és csomagolásokat alkalmaz.

A D-Link azt javasolja, hogy mindig kapcsolja ki vagy húzza ki a D-Link termékeket a tápforrásból, ha nem használja azokat. Ezzel segít az energia megtakarításában és a széndioxid kibocsátásának csökkentésében.

Környezetbarát termékeinkről és csomagolásainkról további információkat a www.dlinkgreen.com weboldalon tudhat meg.

D-Link og miljøet

Hos D-Link forstår vi oss på og er forpliktet til å minske innvirkningen som vår drift og våre produkter kan ha på miljøet. For å minimalisere denne innvirkningen designer og lager D-Link produkter som er så miljøvennlig som mulig, ved å bruke resirkulerbare, lav-toksiske materialer både i produktene og forpakningen.

Dansk

Dette symbol på produktet eller emballagen betyder, at dette produkt i henhold til lokale love og regler ikke må bortskaffes som husholdningsaffald, mens skal sendes til genbrug. Indlever produktet til et indsamplingssted som angivet af de lokale myndigheder, når det er nået til slutningen af dets levetid. I nogle tilfælde vil produktet blive modtaget gratis. Ved at indlevere produktet og dets emballage til genbrug på denne måde bidrager du til at beskytte miljøet og den menneskelige sundhed.

D-Link og miljøet

Hos D-Link forstår vi og bestræber os på at reducere enhver indvirkning, som vores aktiviteter og produkter kan have på miljøet. For at minimere denne indvirkning designer og producerer D-Link sine produkter, så de er så miljøvenlige som muligt, ved at bruge genanvendelige materialer med lavt giftighedsniveau i både produkter og emballage.

Suomi

Tämä symboli tuotteen pakkauksessa tarkoittaa, että paikallisten lakien ja säännösten mukaisesti tätä tuotetta ei pidä hävittää yleisen kotitalousjätteen seassa vaan se tulee toimittaa kierrätettäväksi. Kun tuote on elinikaaren päällä, toimita se lähimpään viranomaisten hyväksymään kierrätyspisteeseen. Kierrättämällä käytetyn tuotteen ja sen pakkausen autat tukemaan sekä ympäristön että ihmisten terveyttä ja hyvinvointia.

D-Link ja ympäristö

D-Link ymmärtää ympäristönsuojelun tärkeyden ja on sitoutunut vähentämään tuotteistaan ja niiden valmistuksesta ympäristölle mahdollisesti aiheutuvia haittavaikutuksia. Nämä negatiiviset vaikutukset minimoidakseen D-Link suunnittelee ja valmistaa tuotteensa mahdollisimman ympäristöstävällisiksi käyttämällä kierrätettäviä, alhaisia pitoisuuksia haitallisia aineita sisältäviä materiaaleja sekä tuotteissaan että niiden pakkauskissa.

Suosittelemme, että irrotat D-Link-tuotteesi virtualähteestä tai sammutat ne aina, kun ne eivät ole käytössä. Toimimalla näin autat säästämään energiaa ja vähentämään hiilidioksidipäästöjä.

SVENSKA

Den här symbolen på produkten eller förpackningen betyder att produkten enligt lokala lagar och föreskrifter inte skall kastas i hushållssoporna utan i stället återvinnas. Ta den vid slutet av dess livslängd till en av din lokala myndighet utsedd uppsamlingsplats, vissa accepterar produkter utan kostnad. Genom att på detta sätt återvinna produkten och förpackningen hjälper du till att bevara miljön och skydda människors hälsa.

D-Link och miljön

På D-Link förstår vi och är fast beslutna att minska den påverkan våra verksamheter och produkter kan ha på miljön. För att minska denna påverkan utformar och bygger D-Link sina produkter för att de ska vara så miljövänliga som möjligt, genom att använda återvinningsbara material med låg gifthalt i både produkter och förpackningar.

För mer information om våra miljöansvariga produkter och förpackningar www.dlinkgreen.com.

PORTUGUÊS

Este símbolo no produto ou embalagem significa que, de acordo com as leis e regulamentações locais, este produto não deverá ser eliminado juntamente com o lixo doméstico mas enviado para a reciclagem. Transporte-o para um ponto de recolha designado pelas suas autoridades locais quando este tiver atingido o fim da sua vida útil, alguns destes pontos aceitam produtos gratuitamente. Ao reciclar o produto e respectiva embalagem desta forma, ajuda a preservar o ambiente e protege a saúde humana.

A D-Link e o ambiente

Na D-Link compreendemos e comprometemo-nos com a redução do impacto que as nossas operações e produtos possam ter no ambiente. Para minimizar este impacto a D-Link concebe e constrói os seus produtos para que estes sejam o mais inofensivos para o ambiente possível, utilizando materiais recicláveis e não tóxicos tanto nos produtos como nas embalagens.

A D-Link recomenda que desligue os seus produtos D-Link quando estes não se encontrarem em utilização. Com esta acção ajudará a poupar energia e reduzir as emissões de CO2.

Para saber mais sobre os nossos produtos e embalagens responsáveis a nível ambiental visite www.dlinkgreen.com.
